Energy Resources for Human Settlement in the Solar System and Earth's Future in Space

William A. Ambrose,James F. Reilly II,Douglas C. Peters,2013-03-14 The book s purpose is to provide the quantitative foundation for beginning to think

about developing energy and minerals outside of Earth s atmosphere that are necessary to support scientific missions space

and extra terrestrial scientific stations and permanent colonies and ultimately expand Earth s economy beyond the near earth

environment to include space resources We cannot envision a situation where all resources required for future space

activities are exported from Earth therefore this book clearly illustrates that an effective economy is possible beyond Earth s

surface when we consider the resources available in near Earth space Our first audience is members of AAPG American

Institute of Mining Metallurgical and Petroleum Engineers AIME and other professionals engaged in energy and resource

development As energy professionals we are concerned on a daily basis with providing the necessary energy and minerals

required for our growing world population and the increasing standard of living that comes with ample energy availability

And more than anything else AAPG members are explorers We are the professionals who have pushed back the boundaries of

our resource base from capturing petroleum resources from surface seeps to drilling onshore wells to extract oil and gas and

to venturing offshore into increasingly difficult and hostile environments to supply the cheap and abundant energy made

available by our advances in technology There are more similarities than differences between deepwater exploration and

development and space exploration Beyond our own members however our audience is every rational human being who

understands human health and well being quality of life education and freedom are dependent on the energy and minerals that support our advanced civilization Space is the next frontier and as the world civilization expands beyond Earth s surface we hope this publication serves to illustrate there are abundant opportunities to support and maintain and in fact allow to prosper civilization s expansion into space Publisher s website *Earth Resources* ,1976 *Extracting Innovations* Martin J. Clifford,Robert K. Perrons,Saleem H. Ali,Tim A. Grice,2018-06-13 This book considers the most contemporary innovations propelling the extractive industries forward while also creating new environmental and social challenges The socio ecological fabric of innovation in the extractive industries is considered through an integrative approach that brings together engineers natural scientists and social scientists academics and practitioners giving an empirically grounded and realistic evaluation of the innovations in this sector It synthesizes a series of questions including Decisions for the Earth World Resources Institute.
