Many other authors, however, suggest that the use of alternative therapies to treat Cushing's is not always the best option for the patient undergoing an endocrine disorder that has not met the criteria of efficacy that will be clearly met in these therapies. Strategic clinical programs for the management of Cushing's disease, thus, depend on the type of clinical outcomes desired, the underlying cause of the disease, the degree of disease, the patient's overall health, and the patient's preferences. In addition, the use of alternative therapies to treat Cushing's disease should be based on the patient's overall health, the degree of disease, the patient's preferences, and the patient's overall health. As an object-oriented system designer, you will need to provide enough detail in the programming code to meet the external class definitions and their self considerations if it will be the code. For example, a design class specification helps define the interfaces and methods. You will have the detailed notation for design classes later in the design but in a preliminary example, classes Figure 3.3 and compare that with Figure 3.4 and (b). Figure 3.5 shows some detailed program code for class definitions. Part 3a illustrates the code in Java, and part 3b illustrates Visual Basic code. You should be able to see where the interfaces and method signatures come from, but the example is shown in Figure 3.4. Notice that the class name, the interfaces, and the method are not derived from the design class notation. Of course, in the design class we took a shortcut by abbreviating the name and last resort to simply name and by condition the programming of an addition from field-defined addition. If there is any question whether a programmer will know that he or she should break that addition down into the detailed fields, then the designer should not take those shortcuts. It is
