**How Chinese Teach Mathematics and Improve Teaching** Yeping Li, Rongjin Huang, 2013 How Chinese Teach Mathematics and Improve Teaching builds upon existing studies to examine mathematics classroom instruction in China. It combines contributions from Chinese scholars with commentary from key Western scholars to offer a truly systematic examination of some important and distinctive features of mathematics classroom instruction. Viewing classroom instruction as part of teachers' instructional practices, this book goes beyond teachers in classroom instructional practice by also examining Chinese teachers' approaches and practices in developing and improving teaching. Through this unique approach, How Chinese Teach Mathematics and Improve Teaching expands and unpacks the otherwise fragmented knowledge about Chinese practices in developing and carrying out mathematics classroom instruction. **Teenagers, Teachers, and Mathematics** David Allen Thomas, 1992 **Christian Home Educators' Curriculum Manual** Cathy Duffy, 2000 Reviews goal setting, what to teach, learning styles, how to teach, planning and record keeping, resource addresses. Cover Resources in Education, 1998 **Traditional Math: An effective strategy that teachers feel guilty using** Barry Garelick, J. R. Wilson, 2022-11-04 Despite experiencing our teaching in different times, we are both oriented to traditional math teaching. It wasn't because we were both taught that way as some may believe, but because that method worked for us and we have seen it work for our students. It is efficient, effective, non-confusing, and helped our students develop mathematical reasoning, understanding, and confidence. Most importantly, it helped them to be successful. So begins the book on traditional math, which provides a glimpse of what explicit instruction looks like in the classroom for grades K through 8. Barry Garelick and J. R. Wilson are retired math teachers who describe the methods of traditionally taught math that they used in their teaching. Their descriptions serve two purposes: 1. It provides assurance to teachers who may already practice these methods that they are not alone, and 2. For others, it may provide some new ideas. Teacher Noticing: Bridging and Broadening Perspectives, Contexts, and Frameworks Edna O. Schack, Molly H. Fisher, Jennifer A. Wilhelm, 2017-05-16 This book reflects on the continuing development of teacher noticing through an exploration of the latest research. The authors and editors seek to clarify the construct of teacher noticing and its related branches and respond to challenges brought forth in earlier research. The authors also investigate teacher noticing in multiple contexts and frameworks, including mathematics, science, international venues, and various age groups. **Constructing Knowledge for Teaching Secondary Mathematics** Orit Zaslavsky, Peter Sullivan, 2011-04-11 Teacher education seeks to transform prospective and/or practicing teachers from neophyte, possibly uncritical perspectives on teaching and learning to more knowledgeable, adaptable, analytic, insightful, observant, resourceful, reflective, and confident professionals ready to address whatever challenges teaching secondary mathematics presents. This transformation occurs optimally through constructive engagement in tasks that foster knowledge for teaching secondary mathematics. Ideally, such tasks provide a bridge between theory and practice and challenge, surprise,

disturb confront extend or provoke examination of alternatives drawn from the context of teaching We define tasks as the problems or activities that having been developed evaluated and refined over time are posed to teacher education participants Such participants are expected to engage in these tasks collaboratively energetically and intellectually with an open mind and an orientation to future practice The tasks might be similar to those used by classroom teachers e g the analysis of a graphing problem or idiosyncratic to teacher education e g critique of videotaped practice This edited volume includes chapters based around unifying themes of tasks used in secondary mathematics teacher education These themes reflect goals for mathematics teacher education and are closely related to various aspects of knowledge required for teaching secondary mathematics They are not based on the conventional content topics of teacher education e g decimals grouping practices but on broad goals such as adaptability identifying similarities productive disposition overcoming barriers micro simulations choosing tools and study of practice This approach is innovative and appeals both to prominent authors and to our target audiences
