1   Mr Chan flies from London to Los Angeles, a distance of 8800 kms.
    The flight takes 11 hours and 10 minutes.

(a) (i)   His plane leaves London at 0935 local time.
   The local time in Los Angeles is 8 hours behind the time in London.

           Calculate the local time when the plane arrives in Los Angeles.

           01:35
           11:10
           12:45

           .... 12:45 .... [2]

     (ii) Work out the average speed of the plane in km/h.

           $$\frac{8800}{11\frac{10}{60}} = \frac{8800}{67/6} = \frac{52800}{67} = 788.059\ldots$$

           .... 788 .... km/h [2]

(b) There are three types of tickets, economy, business and first class.
     The price of these tickets is in the ratio   economy : business : first class = 2 : 5 : 9.

     (i)   The price of a business ticket is $2350.

           Calculate the price of a first class ticket.

           5x = 9 × 2350

           $$x = \frac{9 \times 2350}{5}$$

           $ .... 4230 .... [2]

     (ii) Work out the price of an economy ticket as a percentage of the price of a first class ticket.

           $\frac{2}{9} = 0.\dot{2} = 22.2\%$

           .... 22.2 .... % [1]

(c) The price of a business ticket for the same journey with another airline is $2240.

     (i)   The price of a first class ticket is 70% more than a business ticket.   → NP = 170% = 1.7

           Calculate the price of this first class ticket.

           2240 × 1.7 = 3808

           $ .... 3808 .... [2]
