Resources in Education ,1985 Serves as an index to Eric reports microform   **The Computer in Reading and Language Arts** Jay S. Blanchard,George E. Mason,1987 In this stimulating and readable book educators most of whom have long been involved in computer based literacy research efforts provide up to date information on computer based activities in reading and language arts These experts offer valuable goals and strategies for integrating computer technology into the reading language arts curriculum including suggestions for activities that should and should not be used They also address the basics of developing evaluating and using computer based reading instruction programs The unique benefits of computer technology to teach English as a second language writing skills and the reading process to early readers are thoroughly explored Innovative Uses of the Computer in the Language Arts Classroom Computerized readability assessment Reinforcement and instructional objectives Student interest profiles Class book files This exciting book in a broader sense corrects the failure by many to consider the literacy issues that invariably surround and govern computer use While the types of computer literacy environments differ the literacy requirements are still the same the computer and the user must communicate through text Thus The Computer in Reading and Language Arts provides essential understanding of the literacy requirements and environments involved in computer use   *Computer Applications in Instruction* Northwest Regional Educational Laboratory,Judith B. Edwards,1978 Intended for upper elementary and secondary teachers in all subject areas this guide provides practical advice on determining the appropriate application of computer technology and on the selection of specific subject related computer based instruction units Under the heading of hardware and software topics discussed include communicating with a computer computer size getting and using user s programs translators and programming languages and the elements of a program The computer is analyzed in terms of its uses as instructor laboratory calculator object of instruction and instructor s aide The selection of computer based instructional units is described from the beginning of the selection process through final decision making Individual papers then focus on uses of the computer in the following specific areas art education business education instruction for the deaf and hard of hearing elementary school language arts mathematics curriculum and instruction music education physical education secondary science natural science and the social sciences Keys to Recognizing General Purpose Languages and some primary sources of computer based instructional units are appended LMM   Proceedings Joseph M. Gabbay,John Hayden Woods,2004 In designing the Handbook of the History of Logic the Editors have taken the view that the history of logic holds more than an antiquarian interest and that a knowledge of logic s rich and sophisticated development is in various respects relevant to the research programmes of the present day Ancient logic is no exception The present volume attests to the

distant origins of some of modern logic s most important features such as can be found in the claim by the authors of the chapter on Aristotle s early logic that from its infancy the theory of the syllogism is an example of an intuitionistic non monotonic relevantly paraconsistent logic Similarly in addition to its comparative earliness what is striking about the best of the Megarian and Stoic traditions is their sophistication and originality **InCider** ,1985 *Concept-Rich Mathematics Instruction* Meir Ben-Hur,2006-06-15 Have you ever wondered why students too often have only a rudimentary understanding of mathematics why even rich and exciting hands on learning does not always result in real learning of new concepts The answer lies in whether students have actually learned mathematical concepts rather than merely memorizing facts and formulas Concept Rich Mathematics Instruction is based on the constructivist view that concepts are not simply facts to be memorized and later recalled but rather knowledge that learners develop through an active process of adapting to new experiences The teacher s role is critical in this process When teachers prompt students to reflect on their experiences and report and answer questions verbally students must re examine and even revise their concepts of reality Meir Ben Hur offers expert guidance on all aspects of Concept Rich Mathematics Instruction including Identifying the core concepts of the mathematics curriculum Planning instructional sequences that build upon concepts that students already understand Designing learning experiences that provoke thoughtful discussions about new concepts and prepare students to apply these concepts on their own Identifying student errors particularly those caused by preconceptions as important sources of information and as key instructional tools Conducting classroom dialogues that are rich in alternative representations Using a variety of formative assessment methods to reveal the state of students learning Incorporating problem solving activities that provoke cognitive dissonance and enhance students cognitive competence Concept Rich Mathematics Instruction is grounded in the belief that all students can learn to think mathematically and solve challenging problems If you re looking for a powerful way to improve students performance in mathematics and move closer to fulfilling the NCTM standards look no further this approach provides the building blocks for constructing a first class mathematics program Note This product listing is for the reflowable ePub version of the book **Science and Technology** ,1963 International Science and Technology ,1963 **Administrative Management** ,1981 **Government Executive** ,1982 Educational Press Bulletin Illinois.
