[Leave a reply](#)

– Purpose and Scope – PIPING PNEUMATIC TEST PROCEDURE

This procedure shall supplementary apply to the specified codes and standards (mentioned below) for the performance of pressure testing of pressure piping with gases. During the pressure test it will be determined whether the pressure-retaining walls are leak-tight when exposed to the test pressure and whether any deformations occur which are critical as regards safety.

– Applicable Codes, Rules and Standards

ASME B31.3

– Scheduling of the Pressure Test

Pressure testing shall be performed after completion of all operations on the pressure-retaining wall, but prior to applying painting, insulation, rubber coating, brick -lining, metallic liners and similar coating to the inside and outside wall.

– Test Method

Due to process reasons, the hydrostatic test is not suitable.

The pressure test shall be performed as pneumatic test only.

– Performance

The test pressures applied shall be 1.1 times the maximum operating pressure of the respective line (refer to P&I diagram)

The Manufacturer establish pressure test loops reflected in the P & I diagram prior to testing for approval by Mahler AGS .

Calibrated measuring instruments (pressure gauge) with a measuring range of 1.5 to 4 times the test pressure shall be used. For pneumatic tests 2 measuring instruments working independent from each other shall be used.

The holding time is at least 30 min. Environmental temperature range shall be between 17°C – 45°C.

The test fluid shall be inert, oil-free and dry gas, non-flammable and non-toxic, normally air or nitrogen.
