the era of proliferation of electronic computers They did exist before but they were mechanical During next century they may  
perform other mutations to become optical or molecular or even biological Actually all these aspects are only fancy dresses  
put on mathematical machines This was always recognized to be true in the domain of software where machine or high level  
languages are more or less rigorous but immaterial variations of the universally accepted mathematical language aimed at  
specifying elementary operations functions algorithms and processes But even a mathematical machine needs a physical  
support and this is what hardware is all about The invention of hardware description languages HDL s in the early 60 s was  
an attempt to stay longer at an abstract level in the design process and to push the stage of physical implementation up to  
the moment when no more technology independant decisions can be taken It was also an answer to the continuous  
exponential growth of complexity of systems to be designed This problem is common to hardware and software and may  
explain why the syntax of hardware description languages has followed with a reasonable delay of ten years the evolution of  
the programming languages at the end of the 60 s they were Algol like a decade later Pascal like and now they are C or ADA  
like They have also integrated the new concepts of advanced software specification languages      **The Genesis and**
