ROCKER ARMS AND SHAFTS

DESCRIPTION

The rocker arms are attached to the intake and exhaust valves. The rocker arms are attached to the valve stems by means of the valve stem seals. The rocker arms are attached to the valve stems by means of the valve stem seals. The rocker arms are attached to the valve stems by means of the valve stem seals.

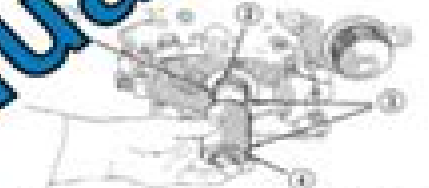

The intake and exhaust valves are retained by retaining caps and bolts. These shafts are used, one for each intake and exhaust valve assembly on each cylinder head. The intake shafts provide a stem for lubricating oil flow from the cylinder head to the valve mechanisms. Retainer shaft springs are used on the intake shafts (P102) to obtain the proper clearance between the intake valve stem and the spark plug tubes.
