(*Submorphemes*) Robert Blust,2022-06-06 This book documents an understudied phenomenon in Austronesian languages
namely the existence of recurrent submorphemic sound meaning associations of the general form CVC It fills a critical gap in
scholarship on these languages by bringing together a large body of data in one place and by discussing some of the
theoretical issues that arise in analyzing this data Following an introduction which presents the topic it includes a critical
review of the relevant literature over the past century and discussions of the following 1 problems in finding the root the
needle in the haystack problem 2 root ambiguity 3 controls on chance as an interfering factor 4 unrecognized morphology as
a possible factor in duplicating evidence 5 the shape structure of the root 6 referents of roots 7 the origin of roots 8 the
problem of distinguishing false cognates produced by convergence in root bearing morphemes from legitimate comparisons
resulting from divergent descent and 9 the problem of explaining how submorphemes are transmitted across generations of
speakers independently of the morphemes that host them The remainder of the book consists of a list of sources for the 197
languages from which data is drawn followed by the roots with supporting evidence a short appendix and references
