Semantics and Morphosyntactic Variation Itamar Francez,Andrew Koontz-Garboden,2017 This is an open access title available under the terms of a CC BY NC ND 4 0 International licence It is free to read at Oxford Scholarship Online and offered as a free PDF download from OUP and selected open access locations This book explores a key issue in linguistic theory the systematic variation in form between semantic equivalents across languages Two contrasting views of the role of lexical meaning in the analysis of such variation can be found in the literature i uniformity whereby lexical meaning is universal and variation arises from idiosyncratic differences in the inventory and phonological shape of language particular functional material and ii transparency whereby systematic variation in form arises from systematic variation in the meaning of basic lexical items In this volume Itamar Francez and Andrew Koontz Garboden contrast these views as applied to the empirical domain of property concept sentences sentences expressing adjectival predication and their translational equivalents across languages They demonstrate that property concept sentences vary systematically between possessive and predicative form and propose a transparentist analysis of this variation that links it to the lexical denotations of basic property concept lexemes At the heart of the analysis are qualities mass like model theoretic objects that closely resemble scales The authors contrast their transparentist analysis with uniformitarian alternatives demonstrating its theoretical and empirical advantages They then show that the proposed theory of qualities can account for interesting and novel observations in two central domains of grammatical theory the theory of syntactic categories and the theory of mass nouns The overall results highlight the importance of the lexicon as a locus of generalizations about the limits of crosslinguistic variation   **Model and Data Engineering** Klaus-Dieter Schewe,Neeraj Kumar Singh,2019-10-21 This book constitutes the refereed proceedings of the 9th International Conference on Model and Data Engineering MEDI 2019 held in Toulouse France in October 2019 The 11 full papers and 7 short papers presented in this book were carefully reviewed and selected from 41 submissions The papers cover broad research areas on both theoretical systems and practical aspects Some papers include mining complex databases concurrent systems machine learning swarm optimization query processing semantic web graph databases formal methods model driven engineering blockchain cyber physical systems IoT applications and smart systems   *Handbook of Sexuality-Related Measures* Terri D. involvement in peacekeeping and humanitarian operations around the world is matched in part by the rise in the number and complexity of these situations There are many more actors on today s peace operations landscape with competing as well as common interests and expectations The need to improve cooperation coordination and more open information sharing is on the rise Efforts to improve and facilitate more open working together and information sharing among the disparate participants must overcome a continuing lack of trust among the civil military actors obsolete national and international policies unrealistic legal and funding constraints and outdated organization cultural traditions and behavior patterns Additionally all actors need to better understand each other and the roles they can and should play in an increasingly complex operational environment In order to obtain closure and improve the future situation the actors must develop relationships based on mutual trust and there must be a clear understanding that cooperation coordination and information sharing is a two way street In reality inefficiencies are inherent in any multilateral activity and competing interests and fear of loss of power and prestige make unity of effort a desired objective but also one that will be difficult to achieve Furthermore information is power and can be an effective means to an end but only if it can be interpreted shared and used effectively for military political or civil use Information can also help reduce uncertainty and provide those that possess it a decided advantage in the decisionmaking process There continues to be a general lack of trust among the players coupled with the lack of a shared understanding of the added value through more open and improved information sharing Information sharing among the actors on the peace operations landscape continues to be largely a manual process These obstacles need to be recognized and to the extent possible practical recommendations developed for ameliorating them Application of new technology must go beyond simply modernizing existing practices and capabilities The civil military community needs to look at new ways of doing business and how the rapidly advancing information technology can be used to leverage the power of information to help achieve timely and appropriate success of peace operations The patterns of conflict for the post cold war environment are changing and so are the approaches to military command and control Advances in information technology have enabled organizations and individuals to more effectively leverage the power of information yet for coalition operations where information sharing is essential to meet mission needs it continues to be problematic The issue is not technology but largely the will on the part of organizations and individuals to make it happen There is also a number of policy doctrine C4ISR systems cultural and environmental challenges that influence the ability to achieve more open sharing of information in coalition operations **Digital Personality: A Man Forever** Kuldeep Singh Kaswan,Jagjit Singh Dhatterwal,Anand Nayyar,2025-05-27 The book explores the creation of digital personalities that mimic human behaviour and cognition authored by AI and computer science experts It covers the technical foundations needed to develop advanced digital personas focusing on the integration of ontologies natural language processing NLP and dialogue generation Ontologies are highlighted for their role in structuring knowledge while NLP techniques are explored for enabling human like dialogue The

book examines algorithms for sentiment analysis entity recognition and context understanding Dialogue generation is also discussed from rule based methods to deep learning emphasizing seamless user interactions Ethical concerns such as privacy bias and accountability are addressed advocating for responsible AI practices This volume is a comprehensive resource for researchers and enthusiasts offering both theoretical insights and practical guidance on building lifelike digital entities and fostering emotionally engaging human computer interactions   *Principal Investigators and R&D Failure* Morgan Boyce,2023-10-19 Failure in R D efforts are fairly common and with many factors that contribute to the outcome This book focuses on the role of principal investigators PIs in R D project failures and provides a theoretical model explaining how firm characteristics including those of the PIs impact the probability of failure The theoretical model also serves as a structural form model to motivate the empirical analysis which assesses the probability of failure in small technology based firms The author uses data from the U S Department of Energy s DOE Small Business Innovation Research SBIR program to build a new and informative tool to assess R D projects and demonstrate the strengths of the theoretical model The association between PIs and R D failure not only provides insights that can have a downstream impact to economic growth but it can also provide policymakers with valuable information to aid decisions in allocating funds for R D   **Proceedings of the 25th Annual Cognitive Science Society** Richard Alterman,David Kirsch,2013-12-16 This volume features the complete text of the material presented at the Twenty Fifth Annual Conference of the Cognitive Science Society As in previous years the symposium included an interesting mixture of papers on many topics from researchers with diverse backgrounds and different goals presenting a multifaceted view of cognitive science This volume includes all papers posters and summaries of symposia presented at the leading conference that brings cognitive scientists together The theme of this year s conference was the social cultural and contextual elements of cognition including topics on collaboration cultural learning distributed cognition and interaction   *The Routledge Companion to Music Theory Pedagogy* Leigh VanHandel,2020-02-26 Today s music theory instructors face a changing environment one where the traditional lecture format is in decline The Routledge Companion to Music Theory Pedagogy addresses this change head on featuring battle tested lesson plans alongside theoretical discussions of music theory curriculum and course design With the modern student in mind scholars are developing creative new approaches to teaching music theory encouraging active student participation within contemporary contexts such as flipped classrooms music industry programs and popular music studies This volume takes a unique approach to provide resources for both the conceptual and pragmatic sides of music theory pedagogy Each section includes thematic anchor chapters that address key issues accompanied by short topics chapters offering applied examples that instructors can readily adopt in their own teaching In eight parts leading pedagogues from across North America explore how to most effectively teach the core elements of the music theory curriculum Fundamentals Rhythm and Meter Core Curriculum Aural Skills Post Tonal Theory Form Popular Music Who What and How We Teach A broad musical repertoire
