

## Laboratory Activity #1 — Student Laboratory Packet

**Relationships and Biodiversity***A Laboratory Activity for the Living Environment***Introduction**

*Botana curus* is a valuable plant because it produces Curol, a compound used for treating certain kinds of cancer. Curol cannot be produced in the laboratory. *Botana curus* grows very slowly and is on the endangered species list, so its ability to provide Curol in large quantities is limited.

Species that are more closely related to *Botana curus* are more likely to produce the important substance Curol. Three similar plant species that are plentiful (X, Y, and Z) may be related to *Botana curus*. You will work as a researcher to:

- gather structural and molecular evidence to determine which plant species is most closely related to the hypothetical species, *Botana curus*
- use this evidence to decide which plant species is most likely to serve as a source of the important substance Curol

**Safety**

- You will need to wear goggles while conducting Tests 4 and 5.
- Do not eat or drink anything in the laboratory while doing this laboratory activity.

**Important Note:** Record all of your data and answers on these laboratory sheets. You will need to keep them for review before the Regents Examination. Later, you will need to transfer your answers to a separate Student Answer Packet. Your teacher will use the packet in grading your work, and the school will retain it as evidence of your completion of the laboratory requirement for the Living Environment Regents Examination.

**Structural Evidence for Relationships**

Perform the following tests and record your observations in Table 1 on page 8 of this packet. Use a hand lens or microscope as needed.

*Test 1-Structural Characteristics of Plants*

- Do not remove the plant samples from the plastic bags/cards.
- Compare the structural characteristics of the plant samples. Record your observations in Table 1 (see page 8).

*Test 2-Structural Characteristics of Seeds*

- Do not remove the seed samples from the plastic bags/cards.
- Compare the structural characteristics of the seed samples. Record your observations in Table 1.

"Relationships and Biodiversity" is a laboratory activity produced by the State Education Department for use in fulfilling part of the laboratory requirement for the Regents Examination in Living Environment. Reproducing any part of this laboratory activity by other than New York State school personnel is illegal.

**What Species Mean** Julia D. Sigwart, 2018-10-29 Everyone uses species All human cultures whether using science or not name species Species are the basic units for science from ecosystems to model organisms Yet there are communication gaps between the scientists who name species called taxonomists or systematists and those who use species names everyone else This book opens the black box of species names to explain the tricks of the name makers to the name users Species are real

and have macroevolutionary meaning and it follows that systematists use a broadly macroevolution oriented approach in describing diversity But scientific names are used by all areas of science including many fields such as ecology that focus on timescales more dominated by microevolutionary processes This book explores why different groups of scientists understand and use the names given to species in very different ways and the consequences for measuring and understanding biodiversity Key selling features Explains the modern multi disciplinary approach to studying species evolution and species discovery and the role of species names in diverse fields throughout the life sciences Documents the importance and urgent need for high quality taxonomic work to address today s most pressing problems Summarises controversies in combining different sometimes quite different datasets used to estimate global biodiversity Focusses throughout on a central theme the disconnect between the makers and the users of names and seeks to create the rhetorical foundation needed to bridge this disconnect Anticipates the future of taxonomy and its role in studies of global biodiversity
