

## Laboratory Activity #1 — Student Laboratory Packet

**Relationships and Biodiversity***A Laboratory Activity for the Living Environment***Introduction**

*Botana curus* is a valuable plant because it produces Curol, a compound used for treating certain kinds of cancer. Curol cannot be produced in the laboratory. *Botana curus* grows very slowly and is on the endangered species list, so its ability to provide Curol in large quantities is limited.

Species that are more closely related to *Botana curus* are more likely to produce the important substance Curol. Three similar plant species that are plentiful (X, Y, and Z) may be related to *Botana curus*. You will work as a researcher to:

- gather structural and molecular evidence to determine which plant species is most closely related to the hypothetical species, *Botana curus*
- use this evidence to decide which plant species is most likely to serve as a source of the important substance Curol

**Safety**

- You will need to wear goggles while conducting Tests 4 and 5.
- Do not eat or drink anything in the laboratory while doing this laboratory activity.

**Important Note:** Record all of your data and answers on these laboratory sheets. You will need to keep them for review before the Regents Examination. Later, you will need to transfer your answers to a separate Student Answer Packet. Your teacher will use the packet in grading your work, and the school will retain it as evidence of your completion of the laboratory requirement for the Living Environment Regents Examination.

**Structural Evidence for Relationships**

Perform the following tests and record your observations in Table 1 on page 8 of this packet. Use a hand lens or microscope as needed.

*Test 1-Structural Characteristics of Plants*

- Do not remove the plant samples from the plastic bags/cards.
- Compare the structural characteristics of the plant samples. Record your observations in Table 1 (see page 8).

*Test 2-Structural Characteristics of Seeds*

- Do not remove the seed samples from the plastic bags/cards.
- Compare the structural characteristics of the seed samples. Record your observations in Table 1.

"Relationships and Biodiversity" is a laboratory activity produced by the State Education Department for use in fulfilling part of the laboratory requirement for the Regents Examination in Living Environment. Reproducing any part of this laboratory activity by other than New York State school personnel is illegal.

**The Atlantic Meridional Transect Programme (1995-2023)** Andrew Paul Rees, Vanda Brotas, Timothy James Smyth, 2024-01-26 Since 1995 the Atlantic Meridional Transect program AMT [www.amt.uk.org](http://www.amt.uk.org) has undertaken extensive measurements of oceanographic and atmospheric variables on a passage between the UK and destinations in the South Atlantic Falkland Islands Chile Uruguay and South Africa This program which spans up to 100 of latitude crosses a range of ecosystems from sub polar to tropical from eutrophic shelf seas and upwelling systems to oligotrophic mid ocean gyres The AMT was originally conceived to utilise the bi annual passage of the RRS James Clark Ross JCR between its home base in the UK and its field base in the Falklands In 2008 cruises switched from bi annual to annual taking place during the boreal autumn austral spring Throughout the lifetime of the AMT program the objectives have evolved to address topical research questions whilst enabling the maintenance of a continuous set of observations relevant to global environmental issues

Evolution and Phylogeny of Pancrustacea Frederick R. Schram, Stefan Koenemann, 2021-11-02 The scientific understanding of arthropod phylogeny and evolution has changed significantly in recent decades One of the most momentous alterations involved crustaceans which are not a monophyletic group but are part of a larger group along with insects Pancrustacea The old ideas surrounding crustacean evolution have served scientists well for many years it is now time to turn toward new research by embracing the results derived from investigations conducted largely within this century For example new definitions have arisen from sources

across several fields of study and Frederick R Schram and Stefan Koenemann have created a book that explores paleobiodiversity and the diversity of modern body plans. Developments within ontogenetic studies continue to generate remarkable insights into crustaceomorph evolution in regard to patterns of embryology and a revolution in the application of development genetics. Phylogeny techniques of analysis and new sources of data derived from molecular sequencing and genetic studies have forced scientists to consider new hypotheses concerning the interrelationships of all the pancrustaceans both the crustaceomorphs and Hexapoda. Yet some fossil groups still remain enigmatic Thylacocephala. Despite this research into fossils even if incompletely understood fills in gaps of our knowledge of paleobiodiversity and it's useful for many things including analyzing the origin and early evolution of Hexapoda. Evolution and Phylogeny of Pancrustacea demonstrates the use of multiple alternative hypotheses and other techniques through the well executed presentation of diverse data sources involving Pancrustacea. Readers are left with clues to great mysteries including the possible pathways of evolution within marine arthropods.

Eating Apes Dale Peterson, 2003. Annotation: As Jane Goodall never fails to mention bush meat is the greatest conservation crisis in my lifetime. **Biology of Earthworms** Ayten Karaca, 2010-11-09. Earthworms which belong to the order Oligochaeta comprise roughly 3 000 species grouped into five families. Earthworms have been called ecosystem engineers much like human engineers they change the structure of their environments. Earthworms are very versatile and are found in nearly all terrestrial ecosystems. They play an important role in forest and agricultural ecosystems. This Soil Biology volume describes the various facets of earthworms such as their role in soil improvement, soil structure and the biocontrol of soil borne plant fungal diseases. Reviews discuss earthworms innate immune system, molecular markers to address various issues of earthworm ecology, earthworm population dynamics and the influences of organic farming systems and tillage. Further topics include the characteristics of vermicompost, relationships between soil earthworms and enzymes, the role of spermathecae, copulatory behavior and adjustment of the donated sperm volume.

*New Challenges and Perspectives in Conservation Breeding Programs* Eliana Pintus, José Luis Ros-Santaella, William Holt, Pierre Comizzoli, 2025-05-21. Conservation Breeding Programs (CBPs) remain essential tools to preserve animal biodiversity and save threatened species from extinction. Despite the advances made during the last decades CBPs have been carried out only on a small number of species mostly mammals and birds. There is therefore an urgent need to develop and complement in situ and ex situ strategies to also preserve other vertebrates like fish, amphibians and reptiles in which the biodiversity loss because of climate change or other anthropogenic activities is even more dramatic. One of the main factors that limits CBPs success is

the lack of knowledge of the animal reproductive biology and behavior which is precisely known for instance in less than 4% of mammals the majority of which are terrestrial species Such knowledge is beneficial not only to enhance but also to control animal fertility that is especially warranted for the management of overabundant or invasive species which represent a further major threat for biodiversity The goal of this Research Topic is to bring together studies that deal with different aspects of animal reproduction both in captive and wild populations This includes both ex situ and in situ approaches such as the management of animal reproduction in captive populations and their reintroduction release into the wild Other approaches such as assisted reproductive technologies and biobanking greatly contribute to the success of conservation breeding This Research Topic also welcomes studies exploring the effects of biotic e g inbreeding diseases stress and abiotic e g anthropogenic activities housing and veterinary care factors on reproductive biology of all vertebrates classes with a special interest to fish amphibians and reptiles As a comprehensive knowledge of animal reproduction and behavior plays a key role for the development and success of breeding programs descriptive studies on reproductive anatomy and physiology of wild or captive species either endangered or overabundant are welcomed The Research Topic also accepts manuscripts that deal with ethical aspects of animal welfare in CBPs and population management of invasive or overabundant species

*Understanding Soils of Mountainous Landscapes* Rahul Bhadouria, Shipra Singh, Sachchidanand Tripathi, Pardeep Singh, 2023-01-21 Understanding Soils of Mountainous Landscapes Sustainable Use of Soil Ecosystem Services and Management focuses on the patterns and processes of mountainous soils including threats due to the fragile nature of mountain ecosystems and the conservation and management of soil ecosystem services and restoration processes The book covers a balanced approach to land and resource management ensuring that environmentally and socio culturally sound interventions are developed and applied in the complex geophysical ecological and social landscapes of the world's mountain systems The book provides holistic understanding of mountain soils to help environmental and soil scientists gain insight and develop new problem solving approaches With obvious up and downstream linkages e g a large proportion of urban centers globally depend on water that originates in the mountains as well as globalization e g continental scale impacts of air pollution and climate change on glaciers the long range success of conservation measures in mountain regions requires that the following discrete but

interconnected interventions be pursued concurrently 1 the protection of biodiversity and ecosystem services 2 empowerment of mountain communities including family farming and 3 elaboration of more thoughtful context specific policy environments for sustainable mountain development Offers comprehensive coverage of all aspects of mountain soils including climate change ecosystem services and threats Focuses on exploring the human and anthropogenic challenges associated with the sustainable management of soils in mountain landscapes Includes content on biochar mediated microbial community dynamics
