Viewing Photography in Post-Dictatorship Latin America David Rojinsky, 2022-11-30 This book examines the archival aesthetic of mourning and memory developed by Latin American artists and photographers between 1997 2016 Particular attention is paid to how photographs of the assassinated or disappeared political dissident of the 1970s and 1980s as found in family albums and in official archives were not only reimagined as conduits for private mourning but also became allegories of social trauma and the struggle against socio political amnesia Memorials art installations photo essays street projections and documentary films are all considered as media for the reframing of these archival images from the era of the Cold War dictatorships in Argentina Chile Guatemala and Uruguay While the turn of the millennium was supposedly marked by the end of history and with the advent of digital technologies by the end of photography these works served to interrupt

and hence belie the dominant narrative on both counts. Indeed the book's overarching contention is that the viewer's affective identification with distant suffering when engaging these artworks is equally interrupted; instead the viewer is invited to apprehend memorial images as emblems of national and international histories of ideological struggle.

Self-Representation in an Expanded Field Ace Lehner, 2021-05-31. Defined as a self image made with a hand held mobile device and shared via social media platforms, the selfie has facilitated self imaging becoming a ubiquitous part of globally networked contemporary life. Beyond this, selfies have facilitated a diversity of image making practices and enabled otherwise representationally marginalized constituencies to insert self representations into visual culture. In the Western European and North American art historical context, self portraiture has been somewhat rigidly, albeit obliquely, defined and selfies have facilitated a shift regarding who literally holds the power to self image. Like self portraits, not all selfies are inherently aesthetically or conceptually rigorous or avant guard. But as this project aims to do, address via a variety of interdisciplinary approaches, selfies have irreversibly impacted visual culture, contemporary art and portraiture in particular. Selfies propose new modes of self imaging forward, emerging aesthetics and challenge established methods; they prove that as scholars and image makers, it is necessary to adapt and innovate in order to contend with the most current form of self representation to date. The essays gathered herein will reveal that in our current moment, it is necessary and advantageous to consider the merits and interventions of selfies and self portraiture in an expanded field of self representations. We invite authors to take interdisciplinary, global perspectives to investigate various sub genres, aesthetic practices and lineages in which selfies intervene to enrich the discourse on self representation in the expanded field today. **Nonhuman Photography** Joanna

Zylinska, 2024-07-02. A new philosophy of photography that goes beyond humanist concepts to consider imaging practices from which the human is absent as both subject and agent. Today, in the age of CCTV, drones, medical body scans and satellite images, photography is increasingly decoupled from human agency and human vision. In *Nonhuman Photography*, Joanna Zylinska offers a new philosophy of photography going beyond the human centric view to consider imaging practices from which the human is absent. Zylinska argues further that even those images produced by humans, whether artists or amateurs, entail a nonhuman, mechanical element: that is, they involve the execution of technical and cultural algorithms that shape our image making devices as well as our viewing practices. At the same time, she notes photography is increasingly mobilized to document the precariousness of the human habitat and tasked with helping us imagine a better tomorrow. With its conjoined human/nonhuman agency and vision, Zylinska claims photography functions as both a form of control and a life shaping force. Zylinska explores the potential of photography for developing new modes of seeing and imagining and presents images from her own photographic project, *Active Perceptual Systems*. She also examines the challenges posed by digitization to established notions of art, culture and the media. In connecting biological extinction and technical obsolescence and discussing the parallels between photography and fossilization, she proposes to understand photography as a light induced

process of fossilization across media and across time scales
