Relationships and Biodiversity

A Laboratory Activity for the Living Environment

Introduction

Botana curus is a valuable plant because it produces Curol, a compound used for treating certain kinds of cancer. Curol cannot be produced in the laboratory. *Botana curus* grows very slowly and is on the endangered species list, so its ability to provide Curol in large quantities is limited. Species that are more closely related to *Botana curus* are more likely to produce the important substance Curol. Three similar plant species that are plentiful (X, Y, and Z) may be related to *Botana curus*.

You will work as a researcher to:

1. Gather structural and molecular evidence to determine which plant species is most closely related to the hypothetical species, *Botana curus*
2. Use this evidence to decide which plant species is most likely to serve as a source of the important substance Curol

Structural Evidence for Relationships

Procedure. Perform the following and record your observations in Table 1 on page 6.

Test 1. Structural Characteristics of Plants

Compare the structural characteristics of the plant samples. Are the leaves oval shaped, spade shaped or irregular shaped? Do the lines run lengthwise or across? Record your observations in Table 1 Column 1.

Test 2. Structural Characteristics of Seeds

Compare the structural characteristics of the seed samples. Are the seeds large, medium or small? Are they black, or gray? Record your observations in Table 1 Column 2.

Test 3. Microscopic Internal Structure of Stems

- a. Examine the microphotographs that show cross sections through stems of *Botana curus* and Species X, Y, and Z. Compare and choose the arrangement (circular or scattered) for the bundles of conducting tissue in each of the specimens. **Refer to Figure 1.**

- b. Record your observations of the conducting tissue arrangements in Table 1 Column 3.

Assessments and Conservation of Biological Diversity from Coral Reefs to the Deep Sea Jose Victor Lopez, 2023-11-30
Assessments and Conservation of Biological Diversity from Coral Reefs to the Deep Sea Uncovering Buried Treasures and the Value of the Benthos examines marine benthic habitats around the world that are linked by their physical location at the bottom of the oceans The book approaches deep sea marine biodiversity with perspectives on genetics microbiology and evolution weaving a narrative of vital expert linkages with the goal of protecting something that most people cannot witness or experience It provides a full assessment of biological diversity within benthic habitats from coral reefs to plankton and fish species and offers global case studies It is the ideal resource for marine conservationists and biologists aiming to expand their knowledge and efforts to the rarely seen yet equally important realms of the ocean and respective benthic species As these deep sea ecosystems and their species face unprecedented threats of destruction and extinction due to factors including climate change this book provides the most current knowledge of this undersea world along with solutions for its conservation Compares and contrasts between shallow and marine habitats to reveal revolutionary connections and continuity Analyzes modern threats and gaps in biological knowledge regarding benthic communities Examines benthic biodiversity through vertical vs horizontal gradients Poses possible solutions for the conservation of benthic habitats and organisms

Addressing Wicked Problems through Science Education Marianne Achiam, Justin Dillon, Melissa Glackin, 2021-08-09 This book discusses a number of ways in which out of school science education can uniquely engage learners with wicked global problems such as biodiversity loss and climate change The idea for the volume originated in discussions among members of the ESERA special interest group on Science Education in Out of School contexts It emerged from these discussions that out of school institutions and experiences offer opportunities for critical engagement in wicked problems that go far beyond what is possible solely in the science classroom The book opens with a principled discussion of the nature of wicked problems and what addressing them involves This introduction clarifies key terms and ideas to create a coherent backdrop for the rest of the book Subsequent chapters discuss the challenges of designing educational experiences to address wicked problems as well as the teaching and learning that takes place The authors offer perspectives across a range of out of school environments such as science centres natural history museums botanical gardens geological sites and local communities The book concludes with a chapter that synthesises the findings from the various contributions and points to the messages for educators Finally the editors outline an exciting research agenda to build knowledge of education addressing wicked problems The intended audience of the book includes teachers educators facilitators teacher educators curriculum developers and early career researchers as well as established researchers

Urbanization and Affordances that Promote Well-Being for (Urban) People and for a Healthy Biosphere Stephan Barthel, Marketta Kyttä, 2020-01-30
The world is urbanizing at an unprecedented rate It is estimated that in the near future urban landscapes for another ca 2 7

billion people will be built on planet Earth approximately converting land equivalent to the size of South Africa Such land conversion coupled with citizen densification increasing in equalities shifting diets and emerging technologies challenge human well being and pose ever increasing demand for resources generated by the Biosphere This Research Topic concentrates on the various ways urbanization can promote individual well being mental physical and social health as well as ecological health a healthy Biosphere What kind of affordances for human health promotion can urbanization include What kinds of affordances for a psychological connection with nature can urbanization include What kinds of nudges for pro environmental behavior and consumption decreasing detrimental consumption behaviors can be actively designed in urban settings The Research Topic at hand uses a transactional approach where an affordance can be understood as a non deterministic in situ precondition for a human activity enabled by relations between abilities of an individual with features of an environment We encourage a broad definition of the concept of affordances where the environment must not be restricted to the material biophysical environment alone but also could be combined with social immaterial features We see that the transactional approach of this Research Topic posits that meaning arises in relations between humans and their environment that it will be equally applicable to natural and designed environments and that it doesn t regard dichotomies like city contra nature or social contra ecological Hence this Research Topic is interested in if the transactional approach can be used as a conceptual tool not only for promotion of mental physical and social health in cities but simultaneously for unraveling relations at the micro scale in cities which can be used for solutions that also promote a healthy Biosphere *Jspr Vol 35-N3*
