

Laboratory Activity #1 — Student Laboratory Packet

Relationships and Biodiversity*A Laboratory Activity for the Living Environment***Introduction**

Botana curus is a valuable plant because it produces Curol, a compound used for treating certain kinds of cancer. Curol cannot be produced in the laboratory. *Botana curus* grows very slowly and is on the endangered species list, so its ability to provide Curol in large quantities is limited.

Species that are more closely related to *Botana curus* are more likely to produce the important substance Curol. Three similar plant species that are plentiful (X, Y, and Z) may be related to *Botana curus*. You will work as a researcher to:

- gather structural and molecular evidence to determine which plant species is most closely related to the hypothetical species, *Botana curus*
- use this evidence to decide which plant species is most likely to serve as a source of the important substance Curol

Safety

- You will need to wear goggles while conducting Tests 4 and 5.
- Do not eat or drink anything in the laboratory while doing this laboratory activity.

Important Note: Record all of your data and answers on these laboratory sheets. You will need to keep them for review before the Regents Examination. Later, you will need to transfer your answers to a separate Student Answer Packet. Your teacher will use the packet in grading your work, and the school will retain it as evidence of your completion of the laboratory requirement for the Living Environment Regents Examination.

Structural Evidence for Relationships

Perform the following tests and record your observations in Table 1 on page 8 of this packet. Use a hand lens or microscope as needed.

Test 1—Structural Characteristics of Plants

- Do not remove the plant samples from the plastic bags/cards.
- Compare the structural characteristics of the plant samples. Record your observations in Table 1 (see page 8).

Test 2—Structural Characteristics of Seeds

- Do not remove the seed samples from the plastic bags/cards.
- Compare the structural characteristics of the seed samples. Record your observations in Table 1.

"Relationships and Biodiversity" is a laboratory activity produced by the State Education Department for use in fulfilling part of the laboratory requirement for the Regents Examination in Living Environment. Reproducing any part of this laboratory activity by other than New York State school personnel is illegal.

Coastal Environmental Quality and Marine Biodiversity Assessment, volume II Dilip Kumar Jha,Ganesh Thiruchitrabalam,Meilin Wu ,Prashanthi Devi Marimuthu,2024-09-05 Large amounts of pollutants and natural disasters have been released into coastal and marine waters wreaking havoc on the ecosystem and ecology Pollution and habitat loss caused by humans have had and continue to have a significant impact on worldwide coastal and estuarine ecosystems More than 80% of all marine pollution originates on land with the majority of it coming from industrial agricultural and urban sources Coastal and marine pollution is caused by human activities such as offshore oil and gas extraction and maritime oil transportation Many of the world s estuaries and coastal zones are experiencing eutrophication hypoxia and other negative consequences as a result of anthropogenic activities As a result it s vital to avoid and regulate coastal and marine pollution as well as build improved monitoring protocols and systems to aid in the understanding of spatial and temporal changes in coastal water quality Recent technological advancements in coastal and marine seawater quality monitoring such as real time data collecting via data buoys large scale remote sensing intervention automated data collection and so on are critical for comprehending real time data and its influence on the environment **Positive Tourism in Africa** Mucha
