Advances in Plastid Biology and Its Applications Niaz Ahmad, Steven J. Burgess, Brent L. Nielsen, 2016-12-12 One of the distinguishing features of plants is the presence of membrane bound organelles called plastids Starting from proplastids undifferentiated plastids they readily develop into specialised types which are involved in a range of cellular functions such as photosynthesis nitrogen assimilation biosynthesis of sucrose starch chlorophyll carotenoids fatty acids amino acids and secondary metabolites as well as a number of metabolic reactions like sulphur metabolism The central role of plastids in many aspects of plant cell biology means an in depth understanding is key for a holistic view of plant physiology Despite the vast amount of research the molecular details of many aspects of plastid biology remains limited Plastids possess their own high copy number genome known as the plastome Manipulation of the plastid genome has been developed as an alternative way to developing transgenic plants for various biotechnological applications High copy number of the plastome site specific integration of transgenes through homologous recombination and potential to express proteins at high levels 70% of total soluble proteins has been reported in some cases are some of the technologies being developed Additionally plastids are inherited maternally providing a natural gene containment system and do not follow Mendelian laws of inheritance allowing each individual member of the progeny of a transplastomic line to uniformly express transgene s Both algal and higher plant chloroplast transformation has been demonstrated and with the ability to be propagated either in bioreactors or in the field both systems are well suited for scale up of production The manipulation of chloroplast genes is also essential for many approaches that attempt to increase

biomass accumulation or re routing metabolic pathways for biofortification food and fuel production This includes metabolic engineering for lipid production adapting the light harvesting apparatus to improve solar conversion efficiencies and engineering means of suppressing photorespiration in crop species which range from the introduction of artificial carbon concentrating mechanisms or those pre existing elsewhere in nature to bypassing ribulose biphosphate carboxylase oxygenase entirely The purpose of this eBook is to provide a compilation of the latest research on various aspects of plastid biology including basic biology biopharming metabolic engineering bio fortification stress physiology and biofuel production

Mars analogs: Environment, Habitability and Biodiversity Yiliang Li, André Antunes, Maggie CY Lau Vetter, David Flannery, 2023-06-15 Martian surface contains diverse lithologies from sedimentary rocks to mafic ultramafic igneous rocks and ground patterns These rocks record the late stage evolution on the Martian surface from a temperate environment with bodies of liquid water to the current cold and hyper arid environment The constraints on the key parameters and processes for water rock interaction sedimentation of materials and geomorphological development can provide important insights into the environmental change and habitability on the Martian surface However due to the difficulty in accessing Martian samples and limited remote sensing data available from the Martian surface most of the mysteries on Mars remain unraveled In this proposed research topic we will focus on geological settings on Earth that are similar to the conditions on Mars These Mars analogs are employed to infer possible processes on Mars and their impact on habitability and the search for life The Mars analogs on Earth span a variety of environments such as the super arid sedimentary plains e g the Qaidam Basin in the north of the Tibetan Plateau the Mojave Basin in the USA and the Atacama Desert in South America the subsurface fracture waters in Precambrian cratons e g the Canadian Shield the Fennoscandian Shield and the Kaapvaal Craton high salinity localities e g Laguna de T rez salt mines and deep sea brines as well as extremely cold and highly radiative environments e g polar regions thin atmosphere These settings on Earth are more accessible for collecting high quality mineralogical geochemical geochronological and microbiological data by the state of the art facilities These data can provide a solid cornerstone for us to understand the cycles of water and other life essential elements and their impact on habitability and biodiversity in extreme environments on Earth as well as the limits of life and the detection of biosignatures Such research can also provide vital insights on the search for life on other planets and moons

Achieving sustainable cultivation of tomatoes Dr A. K. Mattoo, Prof. A. K. Handa, 2017-03-31 Discusses developments in good agricultural practice from crop growth models to improved water and nutrition management Reviews advances in understanding plant physiology and genetic diversity as well as their contribution to improvements in breeding Summarises recent research on diseases and pests as well as their control through developing disease resistant varieties or integrated weed management

Nutrient Cycling in Terrestrial Ecosystems Petra Marschner, Zdenko Rengel, 2007-05-01 Nutrient Cycling in Terrestrial Ecosystems presents a comprehensive overview of nutrient cycling processes and their importance for plant growth and ecosystem sustainability

The first part of the book presents the fundamentals of nutrient cycling. Topics included are cycling of carbon, nitrogen, phosphorus, sulphur, and micronutrients. Particular attention is paid to the role of root exudates and rhizosphere microorganisms in facilitating nutrient cycling. The second part discusses nutrient cycling at an ecosystem scale, covering cropping systems, pastures, natural grasslands, arid lands, tundras, and forests. The final chapter reviews current models of nutrient cycling. By comprehensively covering nutrient cycling at a range of scales and emphasising multidisciplinary approaches, this volume will support scientists and practitioners alike, providing links between those involved in improving sustainable economic output from managed ecosystems and those interested in conservation of natural ecosystems.
