Readings in Multimedia Computing and Networking Kevin Jeffay, Hong Jiang Zhang, 2001-08-10 Readings in Multimedia Computing and Networking captures the broad areas of research and developments in this burgeoning field distills the key findings and makes them accessible to professionals researchers and students alike For the first time the most influential and innovative papers on these topics are presented in a cohesive form giving shape to the diverse area of multimedia computing The seminal moments are recorded by a dozen visionaries in the field and each contributing editor provides a context for their area of research by way of a thoughtful focused chapter introduction The volume editors Kevin Jeffay and Hong Jiang Zhang offer further incisive interpretations of past and present developments in this area including those within media and content processing operating systems and networking support for multimedia This book will provide you with a sound understanding of the theoretical and practical issues at work in the field's continuing evolution Offers an in-depth look at the technical challenges in multimedia and provides real and potential solutions that promise to expand the role of multimedia in business entertainment and education Examines in Part One issues at the heart of multimedia processes the means by which multimedia data are coded compressed indexed retrieved and otherwise manipulated Examines in Part Two the accommodation of these processes by

storage systems operating systems network protocols and applications Written by leading researchers the introductions give shape to a field that is continually defining itself and place the key research findings in context to those who need to understand the state of the art developments

Computational Science — ICCS 2002 Peter M.A. Sloot, C.J. Kenneth Tan, Jack J. Dongarra, Alfons G. Hoekstra, 2003-08-01 Computational Science is the scientific discipline that aims at the development and understanding of new computational methods and techniques to model and simulate complex systems The area of application includes natural systems such as biology environmental and geo sciences physics and chemistry and synthetic systems such as electronics and financial and economic systems The discipline is a bridge between classical computer science logic complexity architecture algorithms mathematics and the use of computers in the aforementioned areas The relevance for society stems from the numerous challenges that exist in the various science and engineering disciplines which can be tackled by advances made in this field For instance new models and methods to study environmental issues like the quality of air water and soil and weather and climate predictions through simulations as well as the simulation supported development of cars airplanes and medical and transport systems etc Paraphrasing R Kenway R D Kenway Contemporary Physics 1994 There is an important message to scientists politicians and industrialists in the future science the best industrial design and manufacture the greatest medical progress and the most accurate environmental monitoring and forecasting will be done by countries that most rapidly exploit the full potential of computational science Nowadays we have access to high end computer architectures and a large range of computing environments mainly as a consequence of the enormous stimulus from the various international programs on advanced computing e g
