Meta-Modeling Jean-Michel Bergé, Oz Levia, Jacques Rouillard, 2012-12-06 Models in system design follow the general tendency in electronics in terms of size complexity and difficulty of maintenance While a model should be a manageable representation of a system this increasing complexity sometimes forces current CAD tool designers and model writers to apply modeling techniques to the model itself Model writers are interested in instrumenting their model so as to extract critical information before the model is complete CAD tools designers use internal representations of the design at various stages The complexity has also led CAD tool developers to develop formal tools theories and methods to improve relevance completeness and consistency of those internal representations Information modeling involves the representation of objects their properties and relationships Performance Modeling When it comes to design choices and trade offs performance is generally the final key However performance estimations have to be extracted at a very early stage in the system design Performance modeling concerns the set of tools and techniques that allow or help the designer to capture metrics relating to future architectures Performance modeling encompasses the whole system including software modeling It has a strong

impact on all levels of design choices from hardware software partitioning to the final layout Information Modeling Specification and formalism have in the past traditionally played little part in the design and development of EDA systems their support environments languages and processes Instead EDA system developers and EDA system users have seemed to be content to operate within environments that are often extremely complex and may be poorly tested and understood This situation has now begun to change with the increasing use of techniques drawn from the domains of formal specification and database design This section of this volume addresses aspects of the techniques being used In particular it considers a specific formalism called information modeling which has gained increasing acceptance recently and is now a key part of many of the proposals in the EDA Standards Roadmap which promises to be of significance to the EDA industry In addition the section looks at an example of a design system from the point of view of its underlying understanding of the design process rather than through a consideration of particular CAD algorithms Meta Modeling Performance and Information Modeling contains papers describing the very latest techniques used in meta modeling It will be a valuable text for researchers practitioners and students involved in Electronic Design Automation

Rural Planning Futures Mark Scott,John Sturzaker,Nick Gallent,Gavin Parker,Amy Burnett,Ian Mell,2025-04-09 Rural

Planning Futures charts the critical societal challenges that are reshaping rural places across the UK and Ireland. The book evaluates current planning processes and explores the prospects for an enhanced cross sectoral and holistic future practice that mediates rural change towards more resilient and sustainable outcomes. Rural places and planning have for too long been viewed as marginal to both the theory and practice of planning. However, rural places are central to addressing critical global challenges from climate action through nature recovery, energy transitions and food security to water quality, while also facing more localised conflicts around housing, the siting of infrastructure and the challenge of sustaining local services. The policy response to these complex challenges has too often been fragmented, siloed and fixated on the short term. By illustrating how key rural capitals are linked and integrated, this book argues for a reset of the rural planning narrative and for the urgent disruption of established ways of working. Using innovative case studies, the chapters detail how planning for rural places must be guided by the pursuit of social value rather than protecting private interests. This book is essential reading for undergraduate and graduate students in planning, geography, rural studies, landscape studies and regional studies.

Oikos and Market Stephen Gudeman, Chris Hann, 2015-06-01. Self-sufficiency of the house is practiced in many parts of the world but ignored in economic theory, just as socialist collectivization is assumed to have brought household self-sufficiency to an end. The ideals of self-sufficiency, however, continue to shape economic activity in a wide range of postsocialist settings. This volume's six comparative studies of postsocialist villages in Eastern Europe and Asia illuminate the enduring importance of the house economy, which is based not on the market but on the order of the house. These formations show that economies depend not only on the macro institutions of markets and states but also on the micro institutions of families, communities and house economies often in an uneasy relationship. **The Railway Engineer**, 1898
