More importantly, it offers specific strategies and suggestions for managers to use in establishing new conservation initiatives or improving the effectiveness of existing initiatives. The book offers an understanding of fundamental issues by explaining how ecosystems are structured and how they support biodiversity, provides specific information and approaches for identifying areas most in need of protection, examines promising strategies that can help reduce biodiversity loss and describes design considerations and methods for measuring success within an adaptive management framework. The book draws on experience and knowledge gained during a five year project of The Nature Conservancy known as the Freshwater Initiative, which brought together a range of practitioners to create a learning laboratory for testing ideas, approaches, tools, strategies and methods. For professionals involved with land or water management including state and federal agency staff, scientists and researchers working with conservation organizations, students and faculty involved with freshwater issues or biodiversity conservation and

policymakers concerned with environmental issues the book represents an important new source of information ideas and approaches Floods in a Changing Climate P. P. Mujumdar,D.
