Rubin,2020-08-25 Whenever socialism has been tried it has led to failure and often great human misery Nonetheless many young people prefer socialism to capitalism There are dozens of books and articles explaining the failures of socialism but these do not seem to have an impact on students One reason for this may be that the books are written in abstract terms and do not relate to the lives of the readers This book takes a different approach It asks the question What will my life be like if I live under socialism Professor Paul Rubin a leading expert on socialism and capitalism shows that under socialism People will be poorer There will be less freedom Goods will be of lower quality but more expensive There will be less innovation The environment will be

in worse shape He also shows that the U S is the most productive and richest country that has ever existed and that the current level of wealth in the U S is due to capitalism Lastly he demonstrates that many critiques of capitalism such as it leads to excessive inequality are mistaken or ill founded Professor Rubin points out an important paradox The young people who are the sharpest critics of capitalism are themselves highly dependent in their daily lives on the products of capitalism These include computers themselves mobile phones Amazon Facebook Instagram Uber Skype Spotify computer games and almost any other modern product Additionally the creators of these products are among the millionaires and billionaires despised by socialists

The Guide to Nature ,1926 [A Future for Planning](#) Michael Harris, 2019-04-25 As well as being spatial planning is necessarily also about the future and yet time has been relatively neglected in the academic practice and policy literature on planning Time in particular the need for longer term thinking is critical to responding effectively to a range of pressing societal challenges from climate change to an ageing population poor urban health to sustainable economic development This makes the relative neglect of time not only a matter of theoretical importance but also increasing practical and political significance A Future for Planning is an accessible wide ranging book that considers how planning practice and policy have been constrained by short termism as well as by a familiar lack of spatial thinking in policy in response to major social economic and environmental challenges It suggests that failures in planning often represent failures to anticipate and shape the future which go well beyond planning systems and practices rather our failure to plan for the longer term relates to wider issues in policy making and governance This book traces the rise and fall of long term planning over the past 80 years or so but also sets out how planning can take responsibility for twenty first century challenges It provides examples of successes and failures of longer term planning from around the world
