tables figures and illustrations to facilitate comprehension of the material as well as thousands of index words to further increase accessibility to the desired information      Towards the rational use of high salinity tolerant plants Helmut Lieth,A.A. Al Masoom,2012-12-06 The symposium on high salinity tolerant plants held at the University of Al Ain in December 1990 dealt primarily with plants tolerating salinity levels exceeding that of ocean water and which at the same time are promising for utilization in agriculture or forestry The papers of the proceedings of this symposium have been published in two volumes This volume 1 deals with mangroves and inland high salinity tolerant plants and ecosystems and is divided into the following categories 1 Vegetation analyses and descriptions of mangroves 2 Ecosystem analyses 3 Physiological analyses 4 Utilization of mangroves and saltmarsh plants 5 Soil and water analyses Volume 2 deals with the improvement of salinity tolerance for traditional crops under marginal soils and irrigation water and is published in Tasks for Vegetation Science series TAVS Vol 28      **Plant Modification For More Efficient Water Use** John Stone,2012-12-02 Plant Modification for More Efficient Water Use is a compilation of the proceedings of the Symposium on Plant Modification for More Efficient Water Use These proceedings aim to make significant progress in identifying the physiological and morphological characteristics of plants by providing considerable control of evapotranspiration and by exploring their possible manipulation This book is divided into four parts focusing on genetic engineering physiological and environmental factors and modeling The first part includes articles about breeding genetic engineering use of variety isogenes genetic modification and phenotype and drought tolerance in relation to efficient use of water The second part presents articles about plant responses to water deficit water use efficiency water stress and drought resistance It also provides articles on plant water balance carbon dioxide requirement soil physical and chemical barriers and soil temperature and air temperature The third part describes models of plant growth for yield prediction light models for estimating the shortwave radiation regime of plant canopies and soil plant atmosphere model In addition this part includes a parametric analysis of the anatomy and physiology of the stomata The last part offers a challenge on plant modification for more efficient water use      *Recent Advances in Flowering Time Control* Christian Jung,Klaus Pillen,Dorothee Staiger,George Coupland,Maria von Korff,2017-03-10 The onset of flowering is an important step during the lifetime of a flowering plant During the past two decades there has been enormous progress in our understanding of how internal and external environmental cues control the transition to reproductive growth in plants Many flowering time regulators have been identified from the model plant *Arabidopsis thaliana* Most of them are assembled in regulatory pathways which converge to central integrators which trigger the transition of the vegetative into an inflorescence meristem For crop cultivation the time of flowering is of utmost importance because it determines yield Phenotypic variation for this trait is largely controlled by genes which were often modified during domestication or crop improvement Understanding the genetic basis of flowering time regulation offers new opportunities for selection in plant breeding and for genome editing and genetic modification of crop species      *Water Deficits and Plant*

*Growth: Plant responses and control of water balance* Theodore Thomas Kozlowski, 1968      **Advances in Soil Science**, 2012-12-06 The study of soils today has taken on increased importance because a rapidly expanding population is placing demands on the soil never before experienced This has led to an increase in land degradation Land degradation is one of the most severe problems facing mankind Volume 11 of *Advances in Soil Science* was devoted entirely to this critical area of soil science From the beginning of agriculture until about 1950 increased food production came almost entirely from expanding the cropland base Since 1950 however the yield per unit of land area for major crops has increased dramatically Much of the increase in yields was because of increased inputs of energy Between 1950 and 1985 the farm tractor fleet quadrupled world irrigated area tripled and use of fertilizer increased ninefold Between 1950 and 1985 the total energy used in world agriculture increased 6.9 times Until recently sustainability was seldom if ever mentioned in agricultural literature Now it is one of the most widely used terms The high costs of irrigation development escalating energy costs during the 1970s public concern over potential negative impacts of fertilizer and pesticides on water supplies soil erosion soil compaction and salinity problems and other concerns have caused many people to question whether many of the present agriculture systems can be sustained As a result soil science is beginning to focus more on sustaining the resource base      **Food Security and Climate Change** Shyam Singh Yadav, Robert J. Redden, Jerry L. Hatfield, Andreas W. Ebert, Danny Hunter, 2019-02-26 This book looks at the current state of food security and climate change discusses the issues that are affecting them and the actions required to ensure there will be enough food for the future By casting a much wider net than most previously published books to include select novel approaches techniques genes from crop diverse genetic resources or relatives it shows how agriculture may still be able to triumph over the very real threat of climate change *Food Security and Climate Change* integrates various challenges posed by changing climate increasing population sustainability in crop productivity demand for food grains to sustain food security and the anticipated future need for nutritious quality foods It looks at individual factors resulting from climate change including rising carbon emission levels increasing temperature disruptions in rainfall patterns drought and their combined impact on planting environments crop adaptation production and management The role of plant genetic resources breeding technologies of crops biotechnologies and integrated farm management and agronomic good practices are included and demonstrate the significance of food grain production in achieving food security during climate change *Food Security and Climate Change* is an excellent book for researchers scientists students and policy makers involved in agricultural science and technology as well as those concerned with the effects of climate change on our environment and the food industry      *Ecological responses to environment stresses* Jelte Rozema, J.A.C. Verkleij, 2012-12-06 September 1987 the Faculty Biology of the Vrije Universiteit Amsterdam commemorated the fact that Prof Dr Wilfried Hans Otto Ernst had been active as a scientist for 25 years This period of 25 years of scientific research started at the Institut für Angewandte Botanik Institute of Applied Botany of the University of Münster FRG In 1965

he completed his Ph D thesis entitled Untersuchungen der Schwermetallpflanzengesellschaften Mitteleuropas unter Einschluss der Alpen He was appointed full Professor at the Department of Ecology of the Vrije Universiteit Amsterdam in 1973 On the occasion of his 25th anniversary as a scientist a promise was made though in covert terms which we could not redeem at that time The promise held to offer Prof Ernst a book in which his former and present staffmembers Ph D students and colleagues should write a review about their specialism concerning a central theme Now at the beginning of 1990 we consider the chapters of Ecological Responses to Environmental Stresses to be completed The book reflects the wide range of research approaches that has been initiated and organized by Wilfried Ernst The editors hope to have attained the primary aim of the production of the book of friends that is to gather relevant papers of staff members and colleagues of Wilfried Ernst The title of the book Ecological Responses to Environmental Stresses covers the majority of the chapters included
