Haley,1994 Neuropsychological assessment is a difficult and complicated process Often clinicians fail to attend to fundamental issues of assessment or are unaware of many of the potential sources of error Given that formal test data on the surface appears unambiguous and objective neuropsychologists may fall into the practice of overemphasizing tests and their scores and underemphasizing the less formal aspects of assessment including all of the prerequisite factors which affect the validity reliability and interpretability of test data Interpretation is far from straightforward and a pragmatic application of assessment results requires attention to a multitude of issues and concerns This practical clinical text takes the reader step by step through the evaluation process and then discusses additional topics and issues of neuropsychological assessment Contributors are all engaged in the clinical practice of neuropsychological assessment as well as in teaching and research Thus they are very familiar with common misconceptions practice errors and methodological problems and are able to integrate both academic and practical aspects of neuropsychological assessment Intended to serve as a graduate level textbook for courses in neuropsychological assessment this book will also be a valuable handbook for interns and professionals who engage in the practice or teaching of clinical neuropsychology Individuals practicing in forensic settings where the evaluation of brain damage or cognitive

**Neuropsychological Interpretation of Objective Psychological Tests** Charles J. Golden, Patricia Espe-Pfeifer, Jana Wachslar-Felder, 2000-04-30 The purpose of this book is to provide a compendium of the possible interpretations that can be used with each of a variety of common tests usually included in a neuropsychological test battery The first chapter discusses some of the pitfalls and cautions when comparing tests while the second chapter examines administrative and scoring issues which may be unclear or unavailable for a given test The remainder and heart of the book is the analysis of the interpretative issues for each of the tests Each chapter is designed to present in a succinct format day to day interpretative strategies and questions for each test The organization of the text

allows the user to get to the core interpretative issues quickly so that there is no need to wade through unnecessary expositions. These strategies and interpretative issues will in turn generate questions for the examiner to address and can lead to the accurate analysis of each test as well as indicating the need for additional tests to be included in a given assessment. Not all available neuropsychological tests have been included; however, these are believed to be a representative sample of the tests in use. Many of the interpretative strategies cited can be used with other tests that focus on similar skills and abilities. The book is intended for beginners in the field as well as individuals who have limited experience. The majority of practitioners who use neuropsychological tests only occasionally will also find the information of great use.

**Board Certification in Clinical Neuropsychology** Kira E. Armstrong, PhD, ABPP, Dean W. Beebe, PhD, ABPP, Robin C. Hilsabeck, PhD, ABPP, Michael W. Kirkwood, PhD, ABPP, 2019-05-01. Pursuit of board certification through the American Board of Professional Psychology (ABPP) has become a standard expectation for clinical neuropsychologists. At the time this book was published, the American Board of Clinical Neuropsychology (ABCN) was the fastest growing specialty board of ABPP with over 1,000 active members. However, the board certification process is challenging and can be intimidating. The objectives of this book are to demystify the process and provide practical advice for achieving board certification through ABPP/ABCN. To start, benefits of board certification are summarized and common myths debunked. Next, individual chapters for each step in the process as well as a chapter devoted to pursuit of the pediatric subspecialty provide details about essential elements of the task, the process, the timeline, strategies for success, common pitfalls, and what happens behind the scenes at ABPP/ABCN. Each of these chapters also has tips for trainees and supervisors who want to get a jump on preparing for board certification. Finally, encouragement and guidance for individuals who encounter setbacks at any step along the way are offered.

Handbook of Normative Data for Neuropsychological Assessment Maura Mitrushina, 2005-02-10. When Handbook of Normative Data for Neuropsychological Assessment was published in 1999, it was the first book to provide neuropsychologists with summaries and critiques of normative data for neuropsychological tests. The Second Edition, which has been revised and updated throughout, presents data for 26 commonly used neuropsychological tests, including Trailmaking, Color Trails, Stroop, Color Word Interference, Auditory Consonant Trigrams, Paced Auditory Serial Addition, Ruff 2 and 7, Digital Vigilance, Boston Naming, Verbal Fluency, Rey-Osterrieth Complex Figure, Hooper Visual Fluency, Design Fluency, Tactual Performance, Wechsler Memory Scale-Revised, Rey Auditory Verbal Learning, Hopkins Verbal Learning, WHO-UCLA Auditory Verbal Learning, Benton Visual Retention, Finger Tapping, Grip Strength, Dynamometer, Grooved Pegboard, Category and Wisconsin Card Sorting tests. In addition, California Verbal Learning, CVLT, and CVLT-II, CERAD List Learning, and selective Reminding Tests, as well as the newest version of the Wechsler Memory

Scale WMS III and WMS IIIA are reviewed. Locator tables throughout the book guide the reader to the sets of normative data that are best suited to each individual case depending on the demographic characteristics of the patient and highlight the advantages associated with using data for comparative purposes. Those using the book have the option of reading the authors' critical review of the normative data for a particular test or simply turning to the appropriate data locator table for a quick reference to the relevant data tables in the Appendices. The Second Edition includes reviews of 15 new tests. The way the data are presented has been changed to make the book easier to use. Meta-analytic tables of predicted values for different ages and education where relevant are included for nine tests that have a sufficient number of homogeneous datasets. No other reference offers such an effective framework for the critical evaluation of normative data for neuropsychological tests. Like the first edition, the new edition will be welcomed by practitioners, researchers, teachers, and graduate students as a unique and valuable contribution to the practice of neuropsychology.
