

Tailgate Hydraulic Lockout Valve

A simple hand operated hydraulic lock out valve is located on the left hand side of the baler. This valve will lock the tailgate rams in any position to permit safe access during maintenance. A spring safety clip will prevent inadvertent operation of the valve.

If any person enters the bale chamber with the tailgate raised, the lock out **MUST** be used.

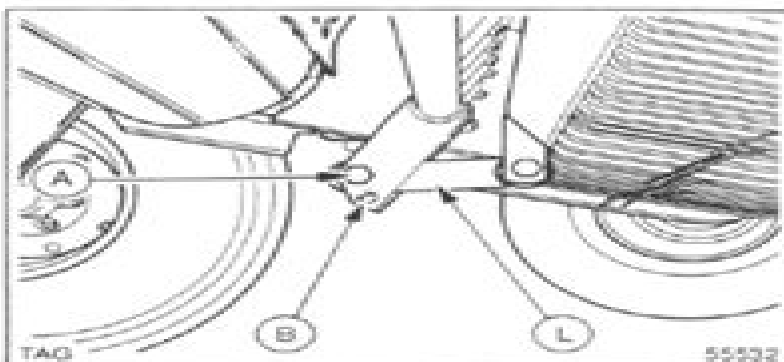

Bale Ramp and Kicker

As the completed bale leaves the chamber, it rolls off the floor roll and onto the bale kicker ramp. The ramp, which is pushed down by the weight of the bale, ensures a smooth soft landing for the bale. This prevents damage occurring to the net or the bale surface. The action of pushing down the ramp extends two coil springs which will rapidly pull the ramp back up and kicks the bale rearward. With this feature no reversing of the baler prior to ejection is required in order for the tailgate to clear the bale when closing. The two coil springs are adjustable to control the force of the bale kicker to suit different crops and bale sizes.

Feeder Fork

The feeder fork effectively transfers the crop from the rear of the pick-up to the floor roller.

Under certain wet silage conditions, crop could be drawn downwards under the feeder causing crop build-up and clutch slippage. To eliminate this it is recommended that the drive arm bolt is located into position (B). This position is also recommended for average straw and stoney conditions.
