Sideways Josh O'Kane, 2022-09-13 NATIONAL BESTSELLER FINALIST FOR THE WRITERS TRUST SHAUGHNESSY COHEN PRIZE FOR POLITICAL WRITING From the Globe and Mail tech reporter who revealed countless controversies while following the Sidewalk Labs fiasco in Toronto an uncompromising investigation into the bigger story and what the Google sister company's failure there reveals about Big Tech data privacy and the monetization of everything When former New York deputy mayor Dan Doctoroff landed in Toronto promising a revolution in better living through technology the locals were starstruck In 2017 a small parcel of land on the city's woefully underdeveloped lakeshore was available for development and with Google co-founder Larry Page and his trusted chairman Eric Schmidt leaning into Sidewalk Labs pitch for the long forsaken property with Doctoroff as the urban planning company's CEO Sidewalk's bid crushed the competition But as soon as the bid was won cracks appeared in the partnership between Doctoroff's team and Waterfront Toronto the government sponsored organization behind the contest There were hundreds more acres of undeveloped former port lands nearby that kept creeping into conversation with Sidewalk and more questions were emerging than answers about how much the public would actually benefit from the Alphabet owned company's vision for the high tech neighbourhood and the data it could harvest from the people living there Alarm bells began ringing in the city's corridors of power and activism To Torontonians accustomed to big promises with little follow through the fiasco that unfolded seemed at first like just another city building sideshow But the pained battle to reel in the power of Sidewalk Labs became a crucible moment in the worldwide battle for privacy rights and against the extension of Big Tech's digital might into the physical world around us With extensive contacts on all sides of the debacle O'Kane tells a story of global consequence fought over a small forgotten parcel of mud and pavement taking readers from California to New York to Toronto to Berlin and back again In the tradition of extraordinary boardroom dramas like *Bad Blood* and *Super Pumped* *Sideways* vividly recreates the corporate drama and epic personalities in this David and Goliath battle that signalled to the world that all may not be lost in the effort to contain the rapidly growing power of Big Tech

The Metainterface Christian Ulrik Andersen, Søren Bro Pold, 2023-10-31 How the interface has moved from the PC into cultural platforms as seen in a series of works of net art software art and electronic literature The computer interface is both omnipresent and invisible at once embedded in everyday objects and characterized by hidden exchanges of information between objects The interface has moved from office into culture with devices apps the cloud and data streams as new cultural platforms In *The Metainterface* Christian Ulrik Andersen and Søren Bro Pold examine the relationships between art and interfaces tracing the interface's disruption of everyday cultural practices They present a new interface paradigm of cloud services smartphones and data capture and examine how particular art forms including net art software art and electronic literature seek to reflect and explore this paradigm Andersen and Pold argue that despite attempts to make the interface disappear into smooth access and smart interaction it gradually resurfaces there is a

metainterface to the displaced interface Art can help us see this the interface can be an important outlet for aesthetic critique Andersen and Pold describe the semantic capitalism of a metainterface industry that captures user behavior the metainterface industry s disruption of everyday urban life changing how the city is read inhabited and organized the ways that the material displacement of the cloud affects the experience of the interface and the potential of designing with an awareness of the language and grammar of interfaces

Words Onscreen Naomi S. Baron, 2015-01-09 People have been reading on computer screens for several decades now predating popularization of personal computers and widespread use of the internet But it was the rise of eReaders and tablets that caused digital reading to explode In 2007 Amazon introduced its first Kindle Three years later Apple debuted the iPad Meanwhile as mobile phone technology improved and smartphones proliferated the phone became another vital reading platform In *Words Onscreen* Naomi Baron an expert on language and technology explores how technology is reshaping our understanding of what it means to read Digital reading is increasingly popular Reading onscreen has many virtues including convenience potential cost savings and the opportunity to bring free access to books and other written materials to people around the world Yet Baron argues the virtues of eReading are matched with drawbacks Users are easily distracted by other temptations on their devices multitasking is rampant and screens coax us to skim rather than read in depth What is more if the way we read is changing so is the way we write In response to changing reading habits many authors and publishers are producing shorter works and ones that don t require reflection or close reading In her tour through the new world of eReading Baron weighs the value of reading physical print versus online text including the question of what long standing benefits of reading might be lost if we go overwhelmingly digital She also probes how the internet is shifting reading from being a solitary experience to a social one and the reasons why eReading has taken off in some countries especially the United States and United Kingdom but not others like France and Japan Reaching past the hype on both sides of the discussion Baron draws upon her own cross cultural studies to offer a clear eyed and balanced analysis of the ways technology is affecting the ways we read today and what the future might bring

Shadow Libraries Joe Karaganis, 2018-05-04 How students get the materials they need as opportunities for higher education expand but funding shrinks From the top down *Shadow Libraries* explores the institutions that shape the provision of educational materials from the formal sector of universities and publishers to the broadly informal ones organized by faculty copy shops student unions and students themselves It looks at the history of policy battles over access to education in the post World War II era and at the narrower versions that have played out in relation to research and textbooks from library policies to book subsidies to more recently the several open publication models that have emerged in the higher education sector From the bottom up *Shadow Libraries* explores how simply students get the materials they need It maps the ubiquitous practice of photocopying and what are in many cases the more marginal ones of buying books visiting libraries and downloading from unauthorized sources It looks at the informal networks that emerge in many contexts to share

materials from face to face student networks to Facebook groups and at the processes that lead to the consolidation of some of those efforts into more organized archives that circulate offline and sometimes online the shadow libraries of the title If Alexandra Elbakyan's Sci Hub is the largest of these efforts to date the more characteristic part of her story is the prologue the personal struggle to participate in global scientific and educational communities and the recourse to a wide array of ad hoc strategies and networks when formal authorized means are lacking If Elbakyan's story has struck a chord it is in part because it brings this contradiction in the academic project into sharp relief universalist in principle and unequal in practice Shadow Libraries is a study of that tension in the digital era Contributors Bal zs Bod Laura Czerniewicz Mirosław Filiciak Mariana Fossatti Jorge Gimetto Eve Gray Evelin Heidel Joe Karaganis Lawrence Liang Pedro Mizukami Jhessica Reia Alek Tarkowski

Reading Writing Interfaces Lori Emerson,2014-06-01 Lori Emerson examines how interfaces from today s multitouch devices to yesterday s desktops from typewriters to Emily Dickinson s self bound fascicle volumes mediate between writer and text as well as between writer and reader Following the threads of experimental writing from the present into the past she shows how writers have long tested and transgressed technological boundaries Reading the means of production as well as the creative works they produce Emerson demonstrates that technologies are more than mere tools and that the interface is not a neutral border between writer and machine but is in fact a collaborative creative space Reading Writing Interfaces begins with digital literature s defiance of the alleged invisibility of ubiquitous computing and multitouch in the early twenty first century and then looks back at the ideology of the user friendly graphical user interface that emerged along with the Apple Macintosh computer of the 1980s She considers poetic experiments with and against the strictures of the typewriter in the 1960s and 1970s and takes a fresh look at Emily Dickinson s self printing projects as a challenge to the coherence of the book Through archival research Emerson offers examples of how literary engagements with screen based and print based technologies have transformed reading and writing She reveals the ways in which writers from Emily Dickinson to Jason Nelson and Judd Morrissey work with and against media interfaces to undermine the assumed transparency of conventional literary practice

Competition Theory in Ecology Peter A. Abrams, 2022-08-25 Competition between species arises when two or more species share at least some of the same limited resources It is likely to affect all

species as well as many higher level aspects of community and ecosystem dynamics Interspecific competition shares many of the same features as density dependence intraspecific competition and evolution competition between genotypes In spite of this a robust theoretical framework is not yet in place to develop a more coherent understanding of this important interaction Despite its prominence in the ecological literature the theory seems to have lost direction in recent decades with many synthetic papers promoting outdated ideas failing to use resource based models and having little utility in applied fields such as conservation and environmental management Competition theory has done little to incorporate new findings regarding consumer resource interactions in the context of larger food webs containing behaviourally or evolutionarily adapting components Overly simple models and methods of analysis continue to be influential Competition Theory in Ecology represents a timely opportunity to address these shortcomings and suggests a more useful approach to modelling that can provide a basis for future models that have greater predictive ability in both ecology and evolution The book concludes with some broader observations on the lack of agreement on general principles to use in constructing mathematical models to help understand ecological systems It argues that a more open discussion and debate of the underlying structure of ecological theory is now urgently required to move the field forward
