

## Neuron Structure: What are the essential structures that make up a neuron?

### Why?

Cells are specialized for different functions in multicellular organisms. In animals, one unique kind of cell helps organisms survive by collecting information and sending messages throughout the body. The shapes and features of neurons, which are the primary cells in the nervous system, enable animals to experience all of the five senses; find food, mates, and shelter; and to survive in their diverse environments.

**Model 1 – Parts of a Neuron**

- Model 1 is an illustration of two neurons. Label one of the neurons in the diagram with the following structures:

Cell body or soma

Axon

Cell nucleus

Synapse

Dendrites

- Which structure(s) on the neuron in Model 1 would receive a signal from either a sensory cell (taste bud, touch receptor, retinal cell) or from another neuron?
- Draw an arrow through the two cells in Model 1 to show the path of a nerve impulse if a message was being sent through the two neurons.

**Model 2 – Membrane Potential**

- Describe the cellular structure shown in detail in Model 2.

- Identify each of these symbols in Model 2.

- Consider Model 2.

- Which side of the membrane has more sodium ions when the neuron is at rest?
- Briefly explain why sodium ions cannot cross the membrane without the use of a protein channel.
- Which direction should sodium ions flow naturally if a channel is provided?

Come explore this in depth examination of the body's master control mechanism the nervous system. The third volume of the Wonders of the Human Body series is the next step in our journey though the most amazing thing in the universe the human body. Our nervous system must process vast amounts of information each second information that comes from all parts of the body. Then nerve signals are sent out in response to those inputs. If this sounds simple rest assured it is not. It is all quite extraordinary. But as with all things in our fallen cursed world things do go wrong. We will also explore the problems that occur when the nervous system is damaged by disease or injury. In *The Nervous System* you will learn about how nerve signals are generated throughout the body. How these nerve signals are transmitted to and from the brain. The structure of the brain and how it processes input from the body. Our senses sight hearing taste and more. When you see the incredible complexity of the nervous system you will realize that our bodies cannot be the result of chemical accidents occurring over millions of years. The human body is the greatest creation of an all knowing Master Designer.      Throphic Function of the Neuron Daniel B. Drachman, 1974      **Nervous System** Kristin Petrie, 2006-08-15
