CPR: Hands Only OR Breaths Only

- **Hand Only:** Place one hand under each armpit and compress the chest medially like an accordion. Push hard (at least 5 inches [15 cm]) and fast (100-220/min). Allow complete chest recoil.
- **Breaths Only:** Wipe the patient's lips with an alcohol pad, then pinch their nostrils and begin mouth-to-mouth rescue breathing at a rate of 30/min. If they vomit, suction the airway, place two NIPAs and deliver breaths by mouth-to-nose.
- **Change compressions/breaths every 2 minutes if fatigued.**
- **Always minimize interruptions in compressions or ventilations.**
- **If PRTCC = 10 attempt to increase by administering a carbonated beverage via nasogastric tube.**

Shock, Energy, Not Defibrillation

- **Quadruple-Sequential Defibrillation (QSD):** Attach 4 defibrillators to the patient with pads encircling the chest, then administer 4 sequential shocks at maximum available energy (eg, initial dose of 200 or 360 J). All subsequent doses are doubled.

Drug Therapy

- **Epinephrine IV/IO dose:** 1.0 mg (1:1000) every 3-5 minutes
- **Flip a coin**
Heads = Amnio IV/IO:
 First dose: 0.000000000 mg/5 mL
 Second dose: 0.000000000 mg/10 mL
Tails = SAM-PAM (sympathomizing mendoiversion w/pulsations of anterolateral meridian) q15-20s

Abstract *—* The purpose of this study was to determine the effect of a 12-week, low-intensity, supervised walking program on the physical and psychological health of sedentary, middle-aged women. The study was a randomized, controlled trial. The subjects were 40 sedentary, middle-aged women who were randomly assigned to either a supervised walking program or a control group. The walking program consisted of 12 weeks of supervised walking, 3 times per week, for 30 minutes per session. The control group consisted of 20 women who did not participate in the walking program. The subjects were assessed at baseline and at 12 weeks. The walking program had a significant positive effect on the physical and psychological health of the subjects. The walking program significantly improved the subjects' physical health, as measured by the 6-minute walk test, and their psychological health, as measured by the Beck Depression Inventory and the State-Trait Anxiety Inventory. The walking program also significantly improved the subjects' quality of life, as measured by the SF-36. The walking program was well tolerated and had no adverse effects. The results of this study suggest that a 12-week, low-intensity, supervised walking program can improve the physical and psychological health of sedentary, middle-aged women.
