Lithium-Ion Cells Yuri Koshtyal , Alexander Rumyantsev, 2024-12-24 A large quantity of articles and books have been published on the designated topics However most of the literary sources describe the results of scientific articles on the synthesis and study of perspective materials reveal circuit and design solutions for constructing control systems and manufacturing batteries and are educational materials At the same time a

small part of the published sources includes the following descriptions of materials produced industrially and used in the LIC manufacturing process demonstrations of the industrially produced LIC energy and power parameters analysis of the characteristics of manufactured miniature lithium ion cells solid state LICs lithium metal cells and all solid state cells as well as others Considering the popularity of the discussed topics one can hope to find detailed information on the Internet Indeed modern search engines make it possible to locate a sufficiently large number of relevant documents However while conducting such research we encountered the following challenges the data are somewhat fragmented and their systematization and structuring are required search results do not always meet search queries For instance data that were relevant to the topic were found but they did not match the query as accumulated data grow the search time for new information extends the choice of search engine and location different countries affects search results the data are not indexed in search engines although the correct keywords and website were requested the information disappears due to website updates and the found data require additional processing For example many presentations show changes in the shape of the discharge curves depending on the discharge current strength In addition however Ragone plots are necessary for a correct comparison and therefore the mathematical processing of presented results is required Thus this book was written to systematize and structure information on industrially produced materials for LIC manufacturing and industrially produced and promising LICs and lithium metal rechargeable cells for various applications

Car Gregory Votolato, 2015-06-15 Whether you drool over their horsepower or decry their emissions the car is an important and ubiquitous part of nearly all of our lives And the history of their design and the innovations of their technologies can tell us a lot about how our values and attitudes have changed In this book Gregory Votolato shows us how and why the automobile has become since its rise in the late nineteenth century at once an object of unparalleled popular

desire and a hugely problematic emblem of the modern world Votolato explores the ways that our love hate relationship with the car has been intimately connected with car design He tells the story of the rise of the private passenger car and all the psychological social and economic functions it has come to serve beyond mere transportation Introducing readers to the automotive design process he traces the lifecycle of the car from the drawing board to the scrapyard offering insights from key figures in the industry as well as a careful evaluation of the car s enormous environmental impact At the same time he looks at the many cultures tied into the automobile from drag racing and customizing to the luxury coachcraft of the classic era Along the way he takes us for a ride in some of the most famous cars ever to have had their tires inflated from the Model T to the Tesla The result is a top down thrilling burn through the history of one of our most beloved and lamented inventions

Select Your Electric Car Dale Stubbart, An Electric Car is often referred to as an electric vehicle or EV In Select Your Electric Car I explore the various options of EVs available in the United States If you live in California or in one of the other states which have similar zero emission vehicle standards you will have more choices These states have laws that car companies selling cars in their state must provide a certain percentage of EVs I am going to focus on the EVs which are widely available in the US now 2018 I ll compare them so that hopefully you will be able to purchase the EV which fits your lifestyle or the lifestyle which you plan to adopt once you own an EV I ll also look at a few other EVs which are not as widely available In 2019 car dealers will be offering more models of EVs nationally at least that s the plan I m thinking that you might want a car with more of a track record So I won t be saying as much about those models though I will mention them The US ranks seventh in number of EVs sold following China United Kingdom France Sweden Netherlands and Norway who is at 1 If you wanted to wait until 2019 to drive your EV and you had 200 000 200K to spare and you had a Commercial Driver s License CDL or could hire a driver who did why not just purchase a Tesla Electric Semi After all Elon Musk is now saying it will have a 600 mile range Even if he s only 75% correct that s still a 450 mile range I could drive into town Olympia every day of the week and up to the big city Seattle on the weekend And I still wouldn t have to charge my rig And in Aug 2018 a Tesla Semi made it from Coast to Coast across the US It did have to be recharged But the driver was able to find charging stations which were powerful enough to charge it But where would I park the thing Besides I don t have a CDL And the few people I know who do aren t interested in being my personal chauffeur I also definitely don t have 200K that I can afford to spend on my next vehicle I won t talk about the Tesla Semi in this book You can read about that vehicle in my book The Hybrid Vehicle I ll also mention techniques for driving an EV which will expand their range At least these techniques work when driving my 2015 Electric Nissan Leaf Rating G Reading Level Easy 6th Grade Longest Word Oversimplification

Design for Transport Mike Tovey, 2016-04-15 The central premise of Design for Transport is that the designer s role is to approach design for transport from the point of view of the user People have a collection of wants and needs and a significant proportion of them are to do with their requirements for mobility The authors show how creative designers can take a user focused approach for a wide range of types of transport products and systems In so doing their starting point is one of creative dissatisfaction with what is currently available and their specialist capability is in imagining and developing new solutions which respond to that opportunity How this is tackled varies depending on the context and the variety of solutions produced reflects the different aspirations and needs of the people they are designing for The chapters cover user needs and transport design and the transport system transport design case studies and the case for the automobile A conclusion briefly signals what the future for transport design might be Lavishly illustrated throughout in four colour Design for Transport is an imaginative and rigorous guide to how designers can take a user centred and socially responsible
