New advances in the field of nerve regeneration Hui

Lu, Wenchuan Zhang, Shizhang Ling, Bo-Zong Shao, Olga Aleinikova, Xiaofeng Yang, 2025-02-17 Nerve regeneration refers to the regeneration or repair of nerve tissue cells or cell products. This mechanism may include the production of new neurons, glia, axons, myelin sheaths, or synapses. Nerve regeneration is clinically important because it is part of the pathogenesis of many diseases. Due to the high incidence of nerve damage, nerve regeneration and repair are becoming a rapidly developing field. The peripheral nervous system (PNS) and central nervous system (CNS) are involved in different functional mechanisms. The peripheral nervous system has the intrinsic ability to repair and regenerate, while the central nervous system largely lacks the ability to repair and regenerate itself. Theories about nervous system regeneration still need to be studied. Much research is still needed to optimize the environment to realize the regenerative potential of nerves. Natural Product Inspired Scaffolds Mohit Kumar, Deepika Kathuria, Ajay Sharma, 2024-08-13 The book explains the use of natural products as scaffolds in tissue engineering. It presents an introduction to the concept of natural product based scaffolds and explores various fabrication strategies for their synthesis. The book highlights the wide range of applications of these scaffolds in tissue engineering, including their use in tissue regeneration, wound healing, plastic surgery, and breast reconstruction. Specific natural products such as gums, xanthan, gellan, arabic, guar, ghatti, gum, chitosan, collagen, are discussed in separate chapters. In addition, various applications of natural product loaded PCL and PLA scaffolds have also been discussed. Each chapter focuses on the application of these natural product based scaffolds and explores their potential in tissue engineering. It also covers specific applications of these scaffolds in tissue regeneration, including angiogenesis, bone, skin, and nerve tissue regeneration. The book addresses important considerations regarding the toxicity and regulatory aspects of natural product based scaffolds and explores the challenges associated with their implementation and emphasizes the need for safety and compliance in their use.
