**Government Deals are Funded, Not Sold** Gene Moran, 2023-11-28 As identified by Bloomberg Government the best performing federal contractors all lobby Congress We might guess that intuitively The common perception of Washington DC as an insider's game persists and it makes sense that the winners lobby However focusing only on best performing contractors limits the view of what unfolds through congressional lobbying or more importantly could unfold for even more companies if they only recognized that they also have access to Congress The tools of congressional influence are available to every company yet the overwhelming majority of federal contractors eschew the opportunity to lobby Congress Sadly it's not just that companies often don't know how It's worse they don't know why lobbying Congress can be helpful Defense represents the most significant portion of the federal budget annually reviewed and approved by Congress As such it's a valuable case study to understand what may contribute to a concentration of winners that garner federal contracts Any company can learn by understanding more about

lobbying in the defense industry The inability or unwillingness to integrate lobbying into a sales strategy stems from hubris ignorance and lack of imagination Thinking I've got this and relying on their wits and narrow networks too many defense executives struggle to gain real traction and consistently win large contracts The result The biggest winners aggregate at the top of the defense industrial base pyramid while the hundreds of thousands of others are left to wonder what just happened and why it's so hard This book focuses on those who do not lobby It's almost too easy to conclude the system is unfair unlikely to change and populated by well connected insiders who move through the revolving door Digging a little deeper this book reveals that the real challenge to more democratized access to Congress is within our reach if we could only see it

Design for Change in Higher Education Jeffrey T. Grabill,Sarah Gretter,Erik Skogsberg,2022-03-01 It s time to design the next iteration of higher education There is no question that higher education faces significant challenges Most of today s universities aren t prepared to tackle issues like demographic change the continued defunding of public education cost pressures and the opportunities and challenges of educational technologies Then of course there is the shock of the COVID 19 pandemic which will reverberate for years and may very well usher higher education into an era of significant structural change Some critics argue that a premium should be placed on change functions that is to say on creativity innovation organizational learning and change management Yet few institutions of higher education have functions focused on thoughtful iterative problem solving and opportunity identification The authors of Design for Change in Higher Education argue that we must imagine and actively make our way to new institutional forms They assert that design a practical art that is conceptually rich and visible in its concreteness must become a core internal competency of the university They propose one grounded in the practical experiences of a specific educational design organization Michigan State University s Hub for Innovation in Learning and Technology which all three authors have helped to run The Hub was created to address issues of participation impact and scale in moving learning innovations from the individual to the collective and from the classroom to the institution Framing each chapter around a case study of design practice in higher education the book uses that case study as the foundation on which to build design theory for higher education It is complemented by an online playbook featuring tactics that can be used and adapted by others interested in

facilitating their own design work Touching on learning experience design LXD as an increasingly critical practice the authors also develop a constructivist view of designing conversations A playbook that grounds theory in practice Design for Change in Higher Education is aimed at faculty staff and students engaged in the important work of imagining new forms of education

**Data Mining: Foundations and Practice** Tsau Young Lin, Ying Xie, Anita Wasilewska, Churn-Jung Liao, 2008-08-20 The IEEE ICDM 2004 workshop on the Foundation of Data Mining and the IEEE ICDM 2005 workshop on the Foundation of Semantic Oriented Data and Web Mining focused on topics ranging from the foundations of data mining to new data mining paradigms The workshops brought together both data mining researchers and practitioners to discuss these two topics while seeking solutions to long standing data mining problems and stimulating new data mining research directions We feel that the papers presented at these workshops may encourage the study of data mining as a scientific field and spark new communications and collaborations between researchers and practitioners To express the visions forged in the workshop to a wider range of data mining researchers and practitioners and foster active participation in the study of foundations of data mining we edited this volume by involving extended and updated versions of selected papers presented at those workshops as well as some other relevant contributions The content of this book includes studies of foundations of data mining from theoretical practical algorithmical and managerial perspectives The following is a brief summary of the papers contained in this book

**The Nuclear Structures of Protocaryotic Organisms (Bacteria and Cyanophyceae)** Georg W. Fuhs, 2012-12-06 of energids per cell is assumed to equal the number of genetic complements as well as the number of viable cells that eventually may emerge from it without replication of its genetic material In eucaryotic cells polyenergidy occurs in the form of cells containing several nuclei each or as polyploidy referring to the co existence of genomes within the boundaries of a single nucleus Obviously terms such as poly nucleated and polyploid are inappropriate for protocaryotic cells The number of energids per cell can be subject to variation as a response to certain environmental conditions 01 during certain phases of a developmental cycle The absence in protocaryotic nuclear bodies of structural components other than DNA markedly affects their structure and morphology Since the protocaryon essentially is an accumulation of DNA the amount molecular organization and chemical state of the DNA are basic determinants of nuclear shape and fine structure Therefore the organized DNA molecule the genophore must be considered the principal subject of any treatise dealing with nuclear cytology in bacteria and Cyanophyceae

more useful for such a highly developed field I have divided the book into four parts Part I is a general introduction to bacterial systems their genetic material structure composition and growth It has seemed desirable to include herein a brief preview of the remaining text to introduce the nomenclature and to help place subsequent chapters in perspective The expression of genetic material and its perturbation through mutation is considered in Part II Part III discusses how the transfer of prokaryotic genetic material can be mediated by plasmids and bacteriophages It describes the DNA transactions involved replication recombination and repair and ends with a description of the genetic and biochemical techniques employed in the study of gene organisation Finally Part IV considers the control of expression of bacterial plasmid and phage genes Key reviews are listed at the end of each chapter
