Go to: <https://phet.colorado.edu/en/simulations/choose/molecular-polarity> Click on the arrow, DOWNLOAD, OPEN and RUN the MOLECULE POLARITY program. Or google "phet molecule polarity" to find the simulation.

## **Introduction:**

In this atomic level simulation, you will investigate how atoms' **electronegativity** values affect the bonds they produce. When two atoms form a covalent bond, a pair of electrons is shared between atoms. **Electronegativity** is a measure of a single atom's ability to attract electrons shared in that bond. In this lab you will work at your own pace, to answer a number of questions. To begin, from what you've already learned about the protons and electrons in an atom, what would cause an atom to have a **high** electronegativity value?

Why might an atom have a low electronegativity value?

## **Procedure:**

**Two Atoms**

- Turn on (check) all view options. **distill** cool the molecule with your mouse.
- Take your time and investigate how the binary compound's bond behaves when the atom's electronegativity and orientation are changed. **Do not rush through this step.** Describe the bond formed between two atoms with **similar, low** electronegativities.

Describe the bond formed between two atoms with **similar, high** electronegativities.

Describe the bond formed between two atoms with **very different** electronegativities.

Describe (in your own words) what is meant by **partial charges**,  $\delta^-$  and  $\delta^+$ .

$\delta^-$  represents: \_\_\_\_\_

$\delta^+$  represents: \_\_\_\_\_

What happens when the electric field is applied to a very polar molecule?

Why do you think this is? \_\_\_\_\_

*Auditory Brainstem Evoked Potentials* Ananthanarayan Krishnan, 2021-10-06 *Auditory Brainstem Evoked Potentials Clinical and Research Applications* provides a solid foundation of the theoretical principles of auditory evoked potentials. This understanding is important for both the development of optimal clinical test strategies and interpretation of test results. Developed for graduate level audiology students, this comprehensive text aims to build a fundamental understanding of auditory evoked brainstem responses ABR and their relationship to normal and impaired auditory function as well as its various audiologic and neurotologic applications. In addition to covering the classical onset ABR, the book provides a thorough review of sustained brainstem responses elicited by complex sounds including auditory steady state response ASSR, envelope following response EFR, and frequency following response FFR, and the growing clinical and research applications of these responses. By exploring why certain stimulus manipulations are required to answer specific clinical questions, the author provides the resources needed for students and clinicians to make reasoned decisions about the optimal protocol to use in a given situation. **Key Features:** A full chapter devoted to laboratory exercises. Numerous illustrations to help explain key concepts. Description of neural bases underlying amplitude and latency changes. Troubleshooting techniques. End of chapter summaries.

**Hormonal Regulation of Development II** T.K. Scott, 2012-12-06 This is the second of the set of three volumes in the *Encyclopedia of Plant Physiology New Series* that will cover the area of the hormonal regulation of plant growth and development. The overall plan for the set assumes that this area of plant physiology is sufficiently mature for a review of current knowledge to be organized in terms of unifying principles and processes. Reviews in the past have generally treated each class of hormone individually, but this set of volumes is subdivided according to the properties common to all classes. Such an organization permits the examination of the hypothesis that differing classes of hormones acting according to common principles are determinants of processes and phases in plant development. Also in keeping with this theme, a plant hormone is defined as a compound with the properties held in common by the native members of the recognized classes of hormone. Current knowledge of the hormonal regulation of plant development is grouped so that the three volumes consider advancing levels of organizational complexity: viz. molecular and subcellular, cells, tissues, organs, and the plant as an organized whole, and the plant in relation to its environment. *Scientific and Technical Aerospace Reports*, 1977.
