Less well known is that this same period was also an era of keen photographic activity. During this time of empire state and nation building, cultural heritage was a potent vehicle and a provider of collective memory and identity. This innovative account analyses the relationship between politics, history, cultural heritage and photography in central east Europe between 1859 and 1945. To understand the work photographs do in the construction of cultural heritage, the author analyses a wide range of little known photographic archives created by contemporary professional and amateur photographers. Their work was extensively exploited in contemporary debates appearing in albums, books, journals, exhibitions, museum exhibits, postcards and newspapers aimed at both scientific and popular and national and international publics. An extensive analysis of how photographic practices and outcomes were applied, borrowed, copied, appropriated and transmitted shows how photography was used to exert or subvert power on the one hand and as a tool in constructing and negotiating group identities on the other. By weaving photography and its patterns of making, dissemination and archival survival through major historical narratives, this volume reveals the centrality of photography and visual discourse at pivotal moments of modern history.
