concept of work. Work is quantified in units known as joules and the distance over which the force is applied. Two classic examples of this principle are the inclined plane and the

attached to the rear of a utility vehicle? These ubiquitous type of machine that assists us in a inclined plane is a surface that leans or slopes. We lack moving components, it facilitates the from lower to higher locations by reducing the e lessened force, the work done remains n contradictory? Consider this: if a man illustrated load vertically, he exerts 300 Newtons of force. ead up a ramp, the force required drops to just 100
