Climate Change Adaptation and Development John Carstensen, 2018-04-19 Climate change is real and it is man made We have put so many greenhouse gas pollutants into the atmosphere that we will see significant and long term change that we need to adapt and adjust to It is important for development practitioners to understand these impacts and the challenge of how and when to adapt to climate change There are plenty of grim presentations of what the extremes of the possible climate scenarios will throw at us over the next 100 years but not all change will be disastrous some change will be beneficial but much of the change will happen at an unprecedented rate that will require the best possible analysis and understanding of how and when we should adapt to climate change This is

important for development practitioners as we invest in ensuring that poverty is reduced and eliminated and the well being of everyone is improved Many countries and communities around the world are vulnerable to the impacts of climate change but developing economies may on one hand be less resilient to the impact but could on the other hand be in a better position to make their development climate smart by making the most efficient use of their economic resources The chapters in this book shine a light on the complexity and the multi dimensional aspects of climate change adaptation They gather some of the experiences of addressing climate change impacts in a development context This book was previously published as a special issue of Development in Practice

An Introduction to the Green Economy

Adrian C. Newton,Elena Cantarello,2014-08-13 The green economy is widely seen as a potential solution to current global economic and environmental crises and a potential mechanism by which sustainable development might be achieved in practice Considerable investments are now being made into the development of green technology renewable energy biodiversity conservation resource efficiency recycling of materials and green infrastructure This textbook provides a comprehensive introduction to the green economy using a strongly interdisciplinary approach based on environmental science rather than treating it as a sub set of economics The scientific principles of sustainability are presented which provide the foundations of the green economy with a particular focus on systems based approaches Examples of real world case studies are used to illustrate how the green economy can be achieved in practice In this way the authors provide a thorough overview of both the

principles and practice of the green economy drawing from a wide range of disciplines including ecology geography social science psychology sustainability science environmental science law and economics The emphasis is on presenting results of the latest research derived from leading scientific journals Rather than focusing on a single definition of what constitutes a green economy the book introduces readers to the diversity of opinion that exists and engages them in what is an active on going debate This reflects the fact that many aspects of the green economy and sustainable development more generally are currently contested In particular the book will help readers to strengthen their ability to critically evaluate the evidence for and against the views presented and to actively contribute to the future development of the green economy

A Pragmatist Orientation for the Social Sciences in Climate Policy Martin Kowarsch, 2016-09-01 While economic and other social science expertise is indispensable for successful public policy making regarding global climate change social scientists face trade offs between the scientific credibility policy relevance and legitimacy of their policy advice From a philosophical perspective this book systematically addresses these trade offs and other crucial challenges facing the integrated economic assessments of the Intergovernmental Panel on Climate Change IPCC Based on John Dewey s pragmatist philosophy and an analysis of the value laden nature and reliability of climate change economics the book develops a refined science policy model and specific guidelines for these assessments of climate policy options The core idea is to scientifically explore the various practical implications of alternative climate policy pathways in an interdisciplinary manner together with diverse stakeholders This could facilitate an iterative deliberative public learning process concerning disputed policy issues This volume makes novel contributions to three strands of the literature 1 the philosophy of social science in policy 2 the philosophy of economics and 3 debates about the design of scientific assessments including the continuous IPCC reform debate This work is thus interesting for philosophers and other scholars reflecting on the science policy interface but also for assessment practitioners climate policy makers and economists The science policy approach developed in this volume has already influenced the recent socio economic IPCC assessment

the climate regime as well as the elaborate institutional and governance architecture that has been created at successive international conferences to develop commitments and promote transparency and compliance The final two chapters address the polycentric nature of international climate change law as well as the intersections of international climate change law with other areas of international regulation This book is an essential introduction to international climate change law for students scholars and negotiators
