Should animals be used in research? This argumentative essay aims to answer the question. It focuses on pros and cons of animal testing for scientific and medical goals.

Introduction

All over the world, animal activists and institutions have argued whether or not research should be used on animals or should be outlawed. Philosophers believe that experiments on animals are not morally justified because they cause pain or harm the animals. A group of these philosophers believe that other alternatives are available, thus they claim that because we have other alternatives, the use of animals in research should be outlawed.

Should Animals Be Used in Research? The Arguments

In my opinion, I support the line of argument that animals should not be used in research. Since the discovery of knowing through science (research), the use of animals in research has elicited mixed reactions among different scholars. Philosophers are against the idea citing the availability of other options for toxicological tests on animals and the harsh treatments the scientists have accorded these animals in the medical tests. Unless scientists discover other ways of testing medicines, I think tests on animals are unethical.

Scientists use these creatures to validate a theory and then revise or change their theories depending on the new facts or information gained from every test performed. Animal rights lobby groups believe that animals are used for no reasons in these experiments as the animals endure pain inflicted on them during these tests (Singer 2). They tend to overlook the fact that animals have moral existence, social and religious values. Thousands of animals on this planet contribute largely to the aesthetic appeal of the land.
