Probing Brain-Behavior Relationship with Multimodal Imaging: Methods and Clinical Applications Bin Jing,Yingying Tang,Yoonmi Hong,Ye Wu,2024-04-10

Nowadays exploring the brain behavior relationship via MRI EEG fNIRS and MEG has become a research hotspot further accelerated by the emergence of large sample open source datasets such as UK Biobank Human Connectome Project the Adolescent Brain Cognitive Development the National Institute of Mental Health NIMH Intramural Healthy Volunteer Dataset the TUH EEG CORPUS and many other multimodal datasets Many prior studies have conducted various prediction tasks in different populations from infants to adults from healthy subjects to patients with miscellaneous imaging modalities however to construct a precise generalizable and reproducible brain behavior relationship is still facing many challenges for example individual variability multi site heterogeneity imaging result interpretability model generalization low prediction performance and lack of clinical applications

Smart Water Utilities Pernille Ingildsen,Gustaf Olsson,2016-05-15 Today there is increasing pressure on the water infrastructure and although unsustainable water extraction and wastewater handling can continue for a while at some point water needs to be managed in a way that is sustainable in the long term We need to handle water utilities smarter New and effective tools and technologies are becoming available at an affordable cost and these technologies are steadily changing water infrastructure options The quality and robustness of sensors are increasing rapidly and their reliability makes

the automatic handling of critical processes viable Online and real time control means safer and more effective operation The combination of better sensors and new water treatment technologies is a strong enabler for decentralised and diversified water treatment Plants can be run with a minimum of personnel attendance In the future thousands of sensors in the water utility cycle will handle all the complexity in an effective way Smart Water Utilities Complexity Made Simple provides a framework for Smart Water Utilities based on an M A D Measurement Analysis Decision This enables the organisation and implementation of Smart in a water utility by providing an overview of supporting technologies and methods The book presents an introduction to methods and tools providing a perspective of what can and could be achieved It provides a toolbox for all water challenges and is essential reading for the Water Utility Manager Engineer and Director and for Consultants Designers and Researchers **Applied Neuroimaging - Editor's Pick 2022** Jan Kassubek,2022-08-04
