### Fill-in-the-Blank

Cerebral	Somatic	Cranial	stress
Spinal	Autonomic	33	
32	relaxed	Peripheral	

The CRANIAL nerves go directly from the brain to the outer parts of the body and have 12 pairs of them. The SPINAL nerves, on the other hand, emerge directly from the spinal cord. It has 31 pairs of nerves. Both of these types of nerves belong to the PERIPHERAL nervous system.

The Peripheral Nervous System is divided into 2 systems. The first one is called the SYMPATHIC system and helps make decisions like washing your face or walking home safely in the school's halls. The second one is called the AUTONOMIC system and takes care of breathing and heartbeat patterns when you are sleeping and awake.

The Sympathetic Nervous System reacts to STRESS and is best known as the "fight or flight" response. The Parasympathetic Nervous System acts when you are RELAXED and occurs when you talking amongst friends or writing notes.

An example of the SYMPATHIC system is when you are eating some delicious Hot Cheddar during a movie.
