The Neuro-Consumer Anne-Sophie Bayle-Tourtoulou, Michel Badoc, 2020-04-24 Neuroscientific research shows that the great majority of purchase decisions are irrational and driven by subconscious mechanisms in our brains This is hugely disruptive to the rational logical arguments of traditional communication and marketing practices and we are just starting to understand how organizations must adapt their strategies This book explains the subconscious behavior of the neuro consumer and shows how major international companies are using these findings to cast light on their own consumers behavior Written in plain English for business and management readers with no scientific background it focuses on how to adapt marketing and communication to the subconscious and irrational behaviors of consumers the direct influence of the primary senses sight hearing smell taste touch on purchasing decisions and the perception of communications by customers brains implications for innovation packaging price retail environments and advertising the use of nudges and artifices to increase marketing and communication efficiency by making them neuro compatible with the brain's subconscious expectations the influence of social media and communities on consumers decisions when collective conscience is gradually replacing individual conscience and recommendation becomes more important than communication and the ethical limits and considerations that organizations must heed when following these principles Authored by two globally recognized leaders in business and neuroscience this book is an essential companion to marketers and brand strategists interested in neuroscience and vital reading for any advanced student or researcher in this area

Neuromodulation en neurologie et en psychiatrie Mihaela Bustuchina Vlaicu, 2023-04-11. La neuromodulation comprend toutes les techniques ciblant des sites spécifiques du système nerveux dans le but de réduire les symptômes ou de restaurer une fonction. Grâce aux progrès et aux connaissances acquises ces dernières années elle constitue désormais une alternative thérapeutique pour nombre de pathologies en neurologie ou psychiatrie chez des patients en échec thérapeutique médicamenteux ou pour réduire les médicaments et limiter leurs effets secondaires parfois majeurs. Après le rappel des notions de base en neuroanatomie et neurophysiologie, l'ouvrage présente les différentes méthodes disponibles, mode de fonctionnement, efficacité, etc. et leurs indications en psychiatrie, notamment la dépendance résistante aux traitements, la schizophrénie, les TOC, le TDAH, les troubles liés à l'usage de substances et en neurologie, la douleur chronique, les migraines, les troubles du mouvement, l'épilepsie, la maladie d'Alzheimer, etc. Fondé sur la littérature scientifique internationale et les principales études de validation des techniques, l'ouvrage apporte tous les éléments nécessaires aux cliniciens pour comprendre les différentes modalités de neuromodulation et leurs applications en pratique en fonction de la pathologie et de sa sévérité. Des algorithmes permettent de situer la place de la neuromodulation parmi l'arsenal thérapeutique disponible selon la situation du patient. L'ouvrage s'adresse ainsi aux neurologues, aux psychiatres, aux algologues et aux médecins prescripteurs ainsi qu'aux neurochirurgiens pour les guider dans une pratique interventionnelle davantage personnalisée en fonction du patient. POINTS CLÉS Les différentes méthodes de neuromodulation et leurs applications en psychiatrie et neurologie. Les connaissances scientifiques actuelles adaptées pour la pratique clinique. Des thérapies encore mal connues malgré leurs bénéfices pour les patients.
