Multimodal Transport Systems Slim Hammadi,Mekki Ksouri,2013-12-11 The use and management of multimodal transport systems including car pooling and goods transportation have become extremely complex due to their large size sometimes several thousand variables the nature of their dynamic relationships as well as the many constraints to which they are subjected The managers of these systems must ensure that the system works as efficiently as possible by managing the various causes of malfunction of the transport system vehicle breakdowns road obstructions accidents etc The detection and resolution of conflicts which are particularly complex and must be dealt with in real time are currently processed manually by operators However the experience and abilities of these operators are no longer sufficient when faced with the complexity of the problems to be solved It is thus necessary to provide them with an interactive tool to help with the management of disturbances enabling them to identify the different disturbances to characterize and prioritize these disturbances to process

them by taking into account their specifics and to evaluate the impact of the decisions in real time Each chapter of this book can be broken down into an approach for solving a transport problem in 3 stages i e modeling the problem creating optimization algorithms and validating the solutions The management of a transport system calls for knowledge of a variety of theories problem modeling tools multi objective problem classification optimization algorithms etc The different constraints increase its complexity drastically and thus require a model that represents as far as possible all the components of a problem in order to better identify it and propose corresponding solutions These solutions are then evaluated according to the criteria of the transport providers as well as those of the city transport authorities This book consists of a state of the art on innovative transport systems as well as the possibility of coordinating with the current public transport system and the authors clearly illustrate this coordination within the framework of an intelligent transport system
