

control and versatility

The RTC4 series of control boards is available with four different interfaces:

- PCI Express (RTC4-PCIE)
- PCI (RTC4-PCI)
- USB (RTC4-SCARStone)
- Ethernet (RTC4-Ethernet)

Equipped with a powerful signal processor, these boards enable synchronous, real-time control of scan systems and lasers. Included DLLs facilitate straightforward program development under Windows. Alternatively, industry-proven software Packages from various third-party suppliers are also available for handling a palette of standard applications.

Every 10 μ s, a 16-bit control signal is transmitted to the scan system. The RTC board's processor performs vital steps such as:

micro-vectorization and image field correction. Various programmable laser signals are available for vector and bitmap processing. For controlling external components, the RTC4 boards provide 16 digital input ports and 16 digital output ports. Additionally, a multitude of available options (e.g. 3D, galvanically isolated laser signals, processing-on-the-fly) give system integrators maximum flexibility in meeting diverse customer requirements.

The RTC4 Ethernet and RTC-SCARStone dispense with needing to integrate a PC into laser processing machines; End customers can connect their own PC/s/laptops via Ethernet or USB. Here, the two boards focus on differing usage scenarios: the RTC4 Ethernet eliminates requiring a PC to be near the scan system (as is normally the case), whereas the SCARStone board allows stand-alone operation (i.e. usage fully without a permanently connected PC).
