

Nellcor Puritan Bennett 740 Ventilator

The NPB 740 ventilator is designed for intra-hospital transport of adult and pediatric patients. An internal battery charges whenever the unit is connected to an AC power source. The internal battery lasts approximately 2.5 hours. No compressed AIR gas source is needed. The support stand holds two E cylinders.

Modes include volume controlled Assist/Control and SIMV. Spontaneous ventilation includes pressure support and CPAP. The only trigger mechanism is a flow trigger adjustable from 1 - 20 LPM. There is no flow during exhalation with the flow trigger. Internal gas flow through a 50 micron gap around the piston drive mechanism allows the unit to detect the beginning of the patient's inspiratory flow which moves the piston forward.

When a mode is selected, the indicators for all the necessary controls are illuminated and flash. The operator touches the key pad of each control, adjusts the value with the knob, and presses the ACCEPT pad located immediately above the knob.

The same touch, adjust, accept pattern is used to adjust the alarms located in the lower corner next to LED linear airway pressure monitor.
