Progenitor Diversity and Neural Cell Specification in the Central Nervous System Marcos R. Costa, Cecilia Hedin-Pereira, Caroline Rouaux, 2015-12-18 The central nervous system continuously perceives integrates processes and generates information These complex functions rely on the detailed elaboration of its cellular network and on the myriads of individual highly differentiated and specialized cell types classically subdivided into neurons astrocytes and oligodendrocytes The specification of these individual populations begins early during development with less differentiated yet already partly restricted progenitor cells Anatomically located in dedicated germinative niches neural progenitors perceive the influence of diffusible molecules of various natures and concentrations These signals result in the initial specialization of cohorts of progenitors that express unique combinations of transcription factors It is now clearly established that both extrinsic and intrinsic signals act in concert to determine the fate potentials of these progenitor cohorts This limitation increases over time adult neural progenitors being more restricted than their developmental counterparts Nevertheless recent data have shown that the fate restriction of neural progenitors as well as that of their progenies can be overwritten upon selected intrinsic factor expression not only during development but also in adulthood This e book is a collection of original research studies

along with review articles that together provide insights into the vast spatiotemporal diversity of neural progenitors and the various factors that govern their fate potential **Psychopharmacology Abstracts** ,1970 **Diabetes Literature Index** ,1971 Basic Sciences for Obstetrics and Gynaecology: Core Material for MRCOG Part 1 Austin Ugwumadu,2014 This book helps doctors to learn the basic sciences for obstetrics and gynaecology and to pass the MRCOG Part 1 exam by extending the reader s knowledge and understanding of the basic medical sciences and their relevance to obstetrics and gynaecology
