## **Neuropsychology Of The Sense Of Agency From Consciousness To Action:**

*Neuropsychology of the Sense of Agency* Michela Balconi, 2010-09-08 Not nothing without you but not the same Erich Fried 1979 How do I know that I am the person who is moving The neuroscience of action has identified specific cognitive processes that allow the organism to refer the cause or origin of an action to its agent This sense of agency has been defined as the sense that I am the one who is causing or generating an action or a certain thought in my stream of consciousness As such one can distinguish actions that are self generated from those generated by others giving rise to the experience of a self other distinction in the domain of action A tentative list of the features distinguishing the concept of agency includes awareness of a goal of an intention to act and of initiation of action awareness of movements a sense of activity of mental effort and of control and the concept of authorship However it remains unclear how these various aspects of action and agency are related to what extent they are dissociable and whether some are more basic than others Their sources remain to be specified and their relationship to action specification and action control mechanism is as yet unknown

**Neuropsychology of the Sense of Agency** Michela Balconi, 2010-11-10 *Neuropsychology of the Sense of Agency* Michela Balconi, 2010 **Sense of Agency: Examining Awareness of the Acting Self** Nicole David, James W Moore, Sukhvinder Obhi, 2015-07-24 The sense of agency is defined as the sense of oneself as the agent of one's own actions This also allows oneself to feel distinct from others and contributes to the subjective phenomenon of self consciousness Gallagher 2000 Distinguishing oneself from others is arguably one of the most important functions of the human brain Even minor impairments in this ability profoundly affect the individual's functioning in society as demonstrated by psychiatric and neurological syndromes involving agency disturbances Della Sala et al 1991 Franck et al 2001 Frith 2005 Sirigu et al 1999 But the sense of agency also plays a role for cultural and religious phenomena such as voodoo superstition and gambling in which individuals experience subjective control over objectively uncontrollable entities Wegner 2003 Furthermore it plays into ethical and law questions concerning responsibility and guilt For these reasons a better understanding of the sense of agency has been important for neuroscientists clinicians philosophers of mind and the general society alike Significant progress has been made in this regard For example philosophical scrutiny has helped establish the conceptual boundaries of the sense of agency Bayne 2011 Gallagher 2000 2012 Pacherie 2008 Synofzik et al 2008 and scientific investigations have shed light on the neurocognitive basis of sense of agency including the brain regions supporting sense of agency Chambon et al 2013 David et al 2007 Farrer et al 2003 2008 Spengler et al 2009 Tsakiris et al 2010 Yomogida et al 2010 Despite this progress there remain a number of outstanding questions such as Are there cross cultural differences in the sense of agency How does the sense of agency develop in infants or change across the lifespan How does social context influence sense of agency What neural networks support sense of agency i.e connectivity and communication between brain regions What are the temporal dynamics with respect to neural processes underlying the sense of agency i.e the what and when of agency

processing How can different cue models of the sense of agency be further specified and empirically supported especially with regards to cue integration weighting What are the applications of sense of agency research clinically engineering etc The concept of the sense of agency offers intriguing avenues for knowledge transfer across disciplines and interdisciplinary empirical approaches especially in addressing the afore mentioned outstanding questions The aim of the present research topic is to promote and facilitate such interdisciplinarity for a better understanding of why and how we typically experience our own actions so naturally and undoubtedly as ours and what goes awry when we do not We thus welcome contributions from for example i neuroscience and psychology including development psychology neuroscience ii psychiatry and neurology iii philosophy iv robotics and v computational modeling In addition to empirical or scientific studies of the sense of agency we also encourage theoretical contributions including reviews models and opinions

*A Transdiagnostic Approach to Obsessions, Compulsions and Related Phenomena* Leonardo F. Fontenelle, Murat Yücel, 2019-01-03 Using a transdiagnostic framework this book describes how mental health professionals can diagnose and treat OCD and related disorder

**Brain Stimulation and Behavioral Change** Claudio Lucchiari, Nicholas J. Kelley, Maria E. Vanutelli, Roberta Ferrucci, 2019-05-15 The eBook entitled Brain Stimulation and Behavioral Change is a collection of articles about the use of transcranial electric stimulation tES to change behaviors and face pathological conditions to enhance cognition and to explore cerebral functions using safe and non invasive brain modulation techniques The tESs include transcranial direct current stimulation tDCS transcranial alternate current stimulation tACS and due to the way it induces changes in the brain Transcranial Magnetic Stimulation TMS The use of tES has recently exploded Certainly one reason for this explosion of research is that it is a cheap way to change behavior However on the other hand we still know very little about the neural mechanisms that underlie tES The present eBook includes both original studies and reviews It covers a wide scope of arguments including studies aimed at testing the potential ability of tES in mitigating physical and psychiatric symptoms and to support neurological rehabilitation enhancing reading abilities motor abilities and creativity Furthermore some contributions about the role of tES in discovering and mapping the neuro functional correlates of higher cognitive functions are also included The common background of the contributions included in the eBook lies in the idea that we need sound scientific evidence about how to move these techniques from labs to real life contexts Addressing these issues and understanding the real potentialities of tES in clinical and non clinical applications require a significant cross fertilization between disciplines We hope this eBook will be able to boost the discussion on this vital topic

Decoding Consciousness and Bioethics Alberto García Gómez, Alberto Carrara, 2022-11-15 Human consciousness is one of the most fascinating mysteries sheltered by the brain evidencing that what happens between our ears is more important than what happens outside our skull In addition how do we know whether someone other than ourselves is conscious This book offers a compelling bioethical analysis of one of the most intriguing topics of neuroscience states of consciousness It brings together the thought provoking contributions of international experts

concerning the role of bioethics in fostering dialogue between different but related fields of study concerning human consciousness and its altered states including ethics of neuroscience psychology philosophy and anthropology theology clinical ethics law and social studies Guilty Acts, Guilty Minds Stephen P. Garvey, 2020-05-25 When someone commits a crime what are the limits on a state's authority to define them as worthy of blame and thus liable to punishment This book answers that question building on two ideas familiar to criminal lawyers actus reus and mens rea usually translated as guilty act and guilty mind In Guilty Acts Guilty Minds Stephen P Garvey proposes an understanding of actus reus and mens rea as limits on the authority of a state and in particular the authority of a democratic state to ascribe guilt to those accused of crime Garvey argues that actus reus and mens rea are necessary conditions for legitimate state punishment Drawing on the work of political philosophers moral philosophers and criminal law theorists Garvey provides clear explanations of how these concepts apply to a wide variety of cases The book charges readers to consider practical examples and ask whatever you believe regarding the justice of the rules did the state act within the scope of its legitimate authority when it enacted those rules into law Based on extensive research this book presents a new theory in which the concepts of actus reus and mens rea mark the limits of state power rather than simply describe the elements of a crime Making the compelling distinction between legitimacy and justice Guilty Acts Guilty Minds provides an important perspective on the limits of state authority

**The Sense of Agency** Patrick Haggard, Baruch Eitam, 2015-08-27 Agency has two meanings in psychology and neuroscience It can refer to one's capacity to affect the world and act in line with one's goals and desires this is the objective aspect of agency But agency can also refer to the subjective experience of controlling one's actions or how it feels to achieve one's goals or affect the world This subjective aspect is known as the sense of agency and it is an important part of what makes us human Interest in the sense of agency has exploded since the early 2000s largely because scientists have learned that it can be studied objectively through analyses of human judgment behavior and the brain This book brings together some of the world's leading researchers to give structure to this nascent but rapidly growing field The contributors address questions such as What role does agency play in the sense of self Is agency based on predicting outcomes of actions And what are the links between agency and motivation Recent work on the sense of agency has been markedly interdisciplinary The chapters collected here combine ideas and methods from fields as diverse as engineering psychology neurology neuroscience and philosophy of mind making the book a valuable resource for any student or researcher interested in action volition and exploring how mind and brain are organized

Affective Touch and the Neurophysiology of CT Afferents Håkan Olausson, Johan Wessberg, India Morrison, Francis McGlone, 2016-10-14 CT afferents are receptors in mammalian hairy skin that fire action potentials when the skin is touched lightly which makes them particularly important in affective touch Traditionally neuroscientific research has focused on more discriminative and haptic properties of touch that are mediated by large myelinated afferents and the coding properties and functional organization of unmyelinated CT afferents have been studied much less The proposed volume will draw together existing knowledge in this nascent field Separate sections will address 1 how we can measure affective touch 2 CT structure and physiology 3 CT processing 4 the contribution of CTs to sexual behavior 5 clinical relevance 6 commercial relevance and 7 future research considerations

**NEITHER MIND NOR BRAIN** CJ ROY, 2020-12-12 This book is an interdisciplinary theoretical effort to explain the mind-body problem Conscious mind is the hard problem to be explained and is the utmost existential question for any scientific mind Neither a reductionist identity theory nor a commonsense religious dualism can answer the problem Human cognitive system can have a natural explanation rather than a religious description To reduce the mind as what the brain does is too premature and to separate the mind and brain as two independent realities is too trivial The hypothesis of the book identifies the conscious mind with the emergent functionality of the human brain And this is definitely an approximate guess This informed guess is a challenge to many previously established theories and is an invitation for further research It demystifies the age-old homunculus mind and does not explain it away To elaborate the theme the author has incorporated themes such as complex system dynamics

evolution cosmology thermodynamics information and emergence The philosophical discussion on the first three chapters govern as an intuitive background for the theoretical development in further chapters It affirms that the mind and brain are neither two dichotomized substances nor are they one and same substance Chapters from four to eight deal with various themes from natural science with respect to the theme of mind brain they involve system dynamics cosmology thermodynamics evolutionary theory and information model Last chapter assimilates the discussions of previous chapters to propose the key hypothesis of the book viz mind brain is the emergent functionality of the human brain which is the matter energy information complex system The universe which itself is a matter energy information system at least in one occasion becomes conscious of itself through humans

### **Psychological Selection and Optimal Experience Across Cultures**

Antonella Delle Fave, Fausto Massimini, Marta Bassi, 2011-02-02 What does Western science know about the relationship between individual well being and cultural trends What can learn from other cultural traditions What do the recent advancements in positive psychology teach us on this issue particularly the eudaimonic framework which emphasizes the connections between personal well being and social welfare People grow and live in cultures that deeply influence their values aspirations and behaviors However individuals in their turn play an active role in building their own goals growth trajectories and social roles at the same time influencing culture trends This process defined psychological selection is related to the individual pursuit of well being People preferentially select and cultivate in their lives activities interests and relationships associated with optimal experience a state of deep engagement concentration and enjoyment Several cross cultural studies confirmed the positive and rewarding features of optimal experience Based on these evidences this book offers a new perspective in the study of human behavior Highlighting the interplay between individual and cultural growth trajectories it conveys a core message educating people to enjoy engagement and involvement in activities that can be relevant and meaningful for social welfare is a premise to foster the harmonious development of human communities and the peaceful cohabitation of cultures

### ***Sensation of Movement* Thor Grünbaum, Mark Schram Christensen, 2017-09-14**

*Sensation of Movement* explores the role of sensation in motor control bodily self recognition and sense of agency The sensation of movement is dependent on a range of information received by the brain from signalling in the peripheral sensory organs to the establishment of higher order goals Through the integration of neuroscientific knowledge with psychological and philosophical perspectives this book questions whether one type of information is more relevant for the ability to sense and control movement Addressing conscious sensations of movement experimental designs and measures and the possible functions of proprioceptive and kinaesthetic information in motor control and bodily cognition the book advocates the integration of neuroscientific knowledge and philosophical perspectives With an awareness of the diverse ideas and theories from these distinct fields the book brings together leading researchers to bridge these divides and lay the groundwork for future research Of interest to both students and researchers of consciousness *Sensation of Movement* will be essential

reading for those researching motor control multimodal perception bodily self recognition and sense of agency It aims to encourage the integration of multiple perspectives in order to arrive at new insights into how sensation of movement can be studied scientifically      *Cognitive Empathy and Perspective Taking: Understanding the Mechanisms of Normal and Abnormal Experiences and Abilities* Renate L.
