**Risk Control and Quality Management in Neurosurgery** H.-J. Steiger, E. Uhl, 2001-10-15 Quality in an invasive discipline such as neurosurgery comprises evidence based medicine, cost effectiveness, and also risk control. Risk control and quality management have become a science on their own, combining the expertise of many specialists such as psychologists, mathematicians, and also economists. Intensive communication with basic safety scientists as well as safety experts from the industry and traffic promises ideas and concepts that can be adopted for neurosurgery. An international conference was held in Munich in October 2000, bringing together neurosurgeons and safety experts from outside medicine in order to discuss basic aspects of risk control and quality management and to develop structures applicable to neurosurgery. Basic aspects such as principles of risk and safety management, the human factor, as well as standards of neurosurgical patient care, proficiency of staff and residents, and industrial quality standards were discussed. The presentations and discussions resulted in a wealth of new ideas and concepts. This book contains this material and thus provides a unique and comprehensive source of information on the current possibilities of quality management in neurosurgery.
