Writing: Words in Action

In a brief essay, explain some of the challenges people and organizations face in their efforts to save endangered animals. Use specific examples from your observations, studies, reading (note to pages 66-67) or personal experiences. Use three or more words from this list to support your response.

Vocabulary in Context

Some of the words you have studied in this list appear in **boldface** type. Read the passage below, and then write the letter of the correct answer for each word as it is used in context.

The Congo Basin, a vast forested region in central Africa, is one of the most biodiverse regions on the planet. One species of animal, the forest elephant, plays a critical role in maintaining the health of this tropical ecosystem. With their massive bulk, the elephants engineer networks of trails through the forests. Other animals, such as giant frogs and antelopes, travel along these trails to avoid **ambush** trails through the thick undergrowth, the base of vegetation under the main canopy of the forest. The elephants eat huge quantities of fuel from a large of trees, dispersing the seeds in their dung and thus ensuring the regeneration of trees. Minerals are also an important part of the elephants' diet, so the animals create clearings along trails where mineral deposits occur. These clearings are used as watering holes by dozens of species.

Because the forest is practically inaccessible, **poaching** is difficult, and poaching this is driven about the forest elephants. Until recently, scientists considered the forest elephant and the larger savanna elephant to be members of the same species. Genetic analysis has confirmed that the two elephants are distinct.

Unfortunately, governments in the region have been plagued with instability and corruption, a situation that makes forest elephants vulnerable to poaching. Local officials, often **portents** and greedy, can be persuaded to allow heavily-armed outsiders into national parks. The poachers may **hobble** surrounding communities and supplying guides to locate elephant herds, moving around forest clearings. The poachers and wild elephants gather food, drink, and excrement. The resulting slaughter can be staggering. After one such massacre, researchers discovered the **humble** bodies of twenty-six elephants, all missing their tusks. The poachers were able to **disband**, loading the ivory into a waiting truck.
