

Tailgate Hydraulic Lockout Valve

A simple hand operated hydraulic lock out valve is located on the left hand side of the baler. This valve will lock the tailgate rams in any position to permit safe access during maintenance. A spring safety clip will prevent inadvertent operation of the valve.

If any person enters the bale chamber with the tailgate raised, the lock out **MUST** be used.

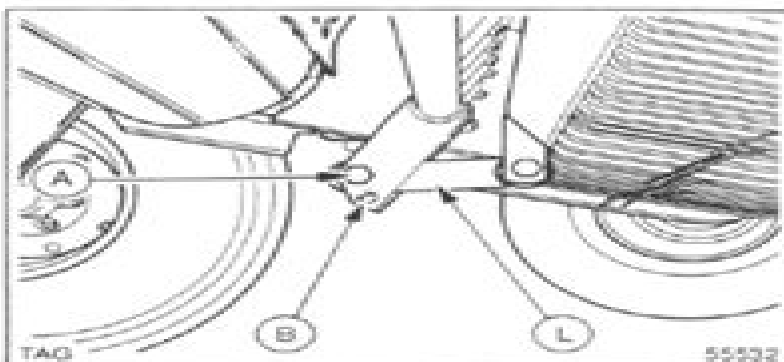

Bale Ramp and Kicker

As the completed bale leaves the chamber, it rolls off the floor roll and onto the bale kicker ramp. The ramp, which is pushed down by the weight of the bale, ensures a smooth soft landing for the bale. This prevents damage occurring to the net or the bale surface. The action of pushing down the ramp extends two coil springs which will rapidly pull the ramp back up and kicks the bale rearward. With this feature no reversing of the baler prior to ejection is required in order for the tailgate to clear the bale when closing. The two coil springs are adjustable to control the force of the bale kicker to suit different crops and bale sizes.

Feeder Fork

The feeder fork effectively transfers the crop from the rear of the pick-up to the floor roller.

Under certain wet silage conditions, crop could be drawn downwards under the feeder causing crop build-up and clutch slippage. To eliminate this it is recommended that the drive arm bolt is located into position (B). This position is also recommended for average straw and stoney conditions.

Science Center Age and Growth Program** Mary Elizabeth Matta,Daniel K. Kimura,2012 The Age and Growth Program at
the Alaska Fisheries Science Center is tasked with providing age data in order to improve the basic understanding of the
ecology and fisheries dynamics of Alaskan fish species The primary focus of the Age and Growth Program is to estimate ages
from otoliths and other calcified structures for age structured modeling of commercially exploited stocks however the
program has recently expanded its interests to include numerous studies on topics ranging from age estimate validation to
the growth and life history of non target species Because so many applications rely upon age data and particularly upon
assurances as to their accuracy and precision the Age and Growth Program has developed this practical guide to document
the age determination of key groundfish species from Alaskan waters The main objective of this manual is to describe
techniques specific to the age determination of commercially and ecologically important species studied by the Age and
Growth Program The manual also provides general background information on otolith morphology dissection and preparation
as well as descriptions of methods used to measure precision and accuracy of age estimates This manual is intended not only
as a reference for age readers at the AFSC and other laboratories but also to give insight into the quality of age estimates to
scientists who routinely use such data **A Manual of Practice in the Courts of the United States** Robert Desty,1889
