Prototyping Reinhard Budde, Karlheinz Kautz, Karin Kühlenkamp, Heinz Züllighoven, 2012-12-06 Prototyping is an approach used in evolutionary system development. In this book, the authors show which forms of prototyping can be employed to tackle which problems. They take a look at the tools used in everyday software development with a view to determining their suitability for prototyping and attempt to elucidate prototyping as a methodological concept. Part I of the book looks at prototyping as an approach for constructing and evaluating models. Traditional approaches and phase-oriented life cycle plans are discussed. Prototyping overcomes fundamental problems

associated with life cycle plans The authors present their own concept of evolutionary system development Part II shows to what extent technical support of evolutionary system development is possible Various tools for supporting prototyping are discussed and prospective trends are indicated Criteria are listed to help the reader choose between the various development environments currently available or likely to become available in the near future Case studies are used to illustrate how prototype construction can be integrated in software projects **Energy Research Abstracts** ,1986 **TOP Bulletin**

Languages Jean Mermet,2012-12-06 The second half of this century will remain as the era of proliferation of electronic computers They did exist before but they were mechanical During next century they may perform other mutations to become optical or molecular or even biological Actually all these aspects are only fancy dresses put on mathematical machines This

was always recognized to be true in the domain of software where machine or high level languages are more or less rigorous but immaterial variations of the universally accepted mathematical language aimed at specifying elementary operations functions algorithms and processes But even a mathematical machine needs a physical support and this is what hardware is all about The invention of hardware description languages HDL s in the early 60 s was an attempt to stay longer at an abstract level in the design process and to push the stage of physical implementation up to the moment when no more technology independant decisions can be taken It was also an answer to the continuous exponential growth of complexity of systems to be designed This problem is common to hardware and software and may explain why the syntax of hardware description languages has followed with a reasonable delay of ten years the evolution of the programming languages at the end of the 60 s they were Algol like a decade later Pascal like and now they are C or ADA like They have also integrated the new concepts of advanced software specification languages
