A fascinating exploration of the intricacies of how we remember, why we forget, and what we can do to protect our memories from the Harvard-trained neuroscientist and bestselling author of *Still Alice*. Using her expertise as a neuroscientist and her gifts as a storyteller, Lisa Genova explains the nuances of human memory. Steven Pinker, Johnstone Professor of Psychology, Harvard University, author of *How the Mind Works*: Have you ever felt a crushing wave of panic when you can't for the life of you remember the name of that actor in the movie you saw last week, or you walk into a room only to forget why you went there in the first place? If you're over forty, you're probably not laughing. You might even be worried that these lapses in memory could be an early sign of Alzheimer's or dementia. In reality, for the vast majority of us, these examples of forgetting are completely normal. Why? Because while memory is amazing, it is far from perfect. Our brains aren't designed to remember every name we hear, plan we make, or day we experience. Just because your memory sometimes fails doesn't mean it's broken or succumbing to disease. Forgetting is actually part of being human. In *Remember*, neuroscientist and acclaimed novelist Lisa Genova delves into how memories are made and how we retrieve them. You'll learn whether forgotten memories are temporarily inaccessible or erased forever, and why some memories are built to exist for only a few seconds, like a passcode, while others can last a lifetime, like your wedding day. You'll come to appreciate the clear distinction between normal forgetting, where you parked your car, and forgetting due to Alzheimer's, that you own a car. And you'll see how memory is profoundly impacted by meaning, emotion, sleep, stress, and context. Once you understand the language of memory and how it functions, its incredible strengths and maddening weaknesses, its natural vulnerabilities and potential superpowers, you can both vastly improve your ability to remember and feel less rattled when you inevitably forget. You can set educated expectations for your memory and, in doing so, create a better relationship with it. You don't have to fear it anymore. And that can be life-changing. **How to Remember Everything** Richard Wiseman, 2018-05-17. Richard Wiseman is arguably the most interesting experimental psychologist working today. Scientific American. Try to remember these letters: R A I O L T A L G. Struggling? Let's rearrange them and try again: A L L I G A T O R. Having a great memory is easy when you know how your mind works. Packed with powerful tricks of the memory trade and the science behind them, psychologist and bestselling writer Professor Richard Wiseman helps you to remember names and faces, birthdays and meetings, telephone numbers and shopping lists, exam answers and pub trivia, and where you left your keys. They are on the small table behind your sofa. Impress your friends, sharpen your mind, and change your life with this unforgettable little gem of a book.
