Revolution M. Freyssenet, 2009-04-30 The rapid takeoff of the continent-sized national economies and the increasing expense of extraction have led to strong tensions in petrol prices and a race towards alternative driving systems This book analyses the emergence of a second automobile revolution through the trajectories of automobile firms since the nineties *Business Week*, 2005 **Covering for the Bosses** Joseph B. Atkins, 2008 Covering for the Bosses Labor and the Southern Press

probes the difficult relationship between the press and organized labor in the South from the past to the present day Written by a veteran journalist and first-hand observer of the labor movement and its treatment in the region's newspapers and other media the text focuses on the modern South that has evolved since World War II In gathering materials for this book Joseph B Atkins crisscrossed the region interviewing workers managers labor organizers immigrants activists and journalists and canvassing labor archives Using individual events to reveal the broad picture Covering for the Bosses is a personal journey by a textile worker's son who grew up in North Carolina worked on tobacco farms and in textile plants as a young man and went on to cover as a reporter many of the developments described in this book Atkins details the fall of the once dominant textile industry and the region's emergence as the Sunbelt South He explores the advent of Detroit South with the arrival of foreign automakers from Japan Germany and South Korea And finally he relates the effects of the influx of millions of workers from Mexico and elsewhere Covering for the Bosses shows how with few exceptions the press has been a key partner in the powerful alliance of business and political interests that keep the South the nation's least unionized region Joseph B Atkins is a widely published journalist professor of journalism at the University of Mississippi and editor of The Mission Journalism Ethics and the World Stanley Aronowitz is professor of sociology and cultural studies at the Graduate Center of the City University of New York He is the author most recently of Left Turn Forging a New Political Future The Knowledge Factory and How Class Works **Positioning the Brand** Rik Riezebos, Jaap van der Grinten, 2012-03-15

Positioning is hot Not only in the realm of consumer goods manufacturers but also for other companies institutions governments and even individual persons An explosion of good quality products on the market and targeted media and advertising campaigns has led to an increasing interest from organizations as to how to strategically position their brand Up to now only a few books on positioning were published Positioning the Brand picks up the gauntlet with an approach based on two fundamental choices Firstly the book was written from the perspective of the brand manager and has therefore been shaped as a practical roadmap Secondly this book advocates a new stance on positioning teaching the reader to look from the inside out instead of adopting the usual outside in methodology This inside out approach departs from an analysis of the corporate identity enabling better fulfilment of external positioning and ensuring internal support This book is intended for future managers marketing professionals and communication professionals responsible for the commercial success and reputation of a brand The contents have a practical set up reinforced by engaging examples and enable the reader to individually complete a positioning process

Traub,Miles A. Whittington,2010 This book first reviews the case that brain oscillations not only are important for cognition as long suspected but also play a part in the expression of signs and symptoms of neuropsychiatric disorders The cellular mechanisms of many of the clinically relevant oscillations have been studied by the authors and their colleagues using in vitro slice methods as well as detailed computer simulations A surprising insight is that gap junctions between principal neurons play an absolutely critical role in so many types of oscillation in neuronal populations oscillations are not just the result of properties of individual neurons and their synaptic connections Furthermore the way in which gap junctions produce oscillations in the cortex is novel involving as it does global properties of networks rather than just the time constants of membrane currents This insight has implications for therapeutics as well as for our understanding of normal brain functions
