Osmosis & Diffusion

Cell Membrane

Each animal cell has a cell membrane that controls what goes in and out of the cell. It is made of a phospholipid bilayer. The cell membrane is made of a phospholipid bilayer. The cell membrane is made of a phospholipid bilayer. The cell membrane is made of a phospholipid bilayer.

Diffusion

Small molecules move across cell membranes through a natural ability called diffusion. Diffusion happens by which a substance moves from a place of high concentration to a place of low concentration. This process continues until the concentration of the substance is the same on both sides of the membrane.

Osmosis

Osmosis is the diffusion of water across a selectively permeable membrane. The movement of water from one side of a membrane to the other.

Active transport
The movement of molecules across the cell membrane from a low concentration to a high concentration through a transport protein. The transport of molecules across the cell membrane from a low concentration to a high concentration through a transport protein.

Passive transport
The movement of molecules across the cell membrane from a high concentration to a low concentration through a transport protein. The transport of molecules across the cell membrane from a high concentration to a low concentration through a transport protein.
