

Chords – Tangents – Secants Formulas Reference Sheet

Angle Formulas

"The Hourglass"

(Two intersecting chords)

Think of an hourglass: the sand starts on the top, goes down through the middle, and ends at the bottom.

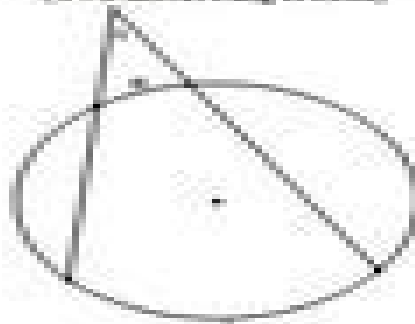

- a = the measure of the top left arc
- c = the measure of the bottom left arc
- b = the measure of the bottom right arc

$$\text{Angle formula: } \frac{a + b}{2} = m\angle$$

Note: m is the supplement of m ; $m + M = 180^\circ$

"The A-Frame"

(Two intersecting secants)

- a = the measure of the outer segment
- b = the measure of the inner segment
- c = the measure of the outer segment
- d = the measure of the inner segment

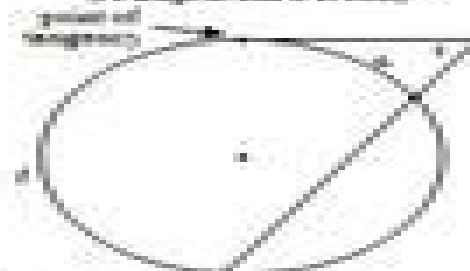

It may help to think of it this way:

$$\text{corner} = \frac{\text{far} - \text{near}}{2}$$

$$\text{Angle formula: } \frac{b - d}{2} = m\angle$$

"The Lucky Seven"

(A tangent and a secant)

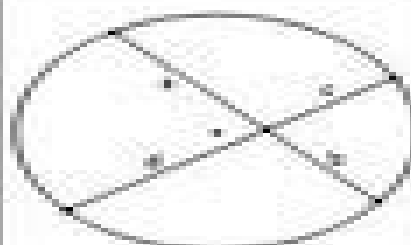

Notice that the tangent segment intersects the circle (the top of the "7"), and it also intersects a secant, which passes through the circle.

Same formula as for the A-Frame:

- a = the measure of the outer segment
- b = the measure of the outer segment
- c = the measure of the inner segment

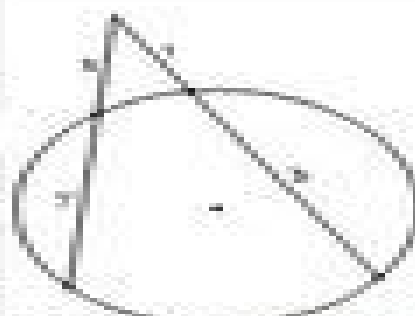

$$\text{Angle formula: } \frac{b - c}{2} = m\angle$$

Length Formulas

To determine the lengths, just think of this as a big ol' cross-multiplication:

$$\text{Length formula: } ab = cd$$

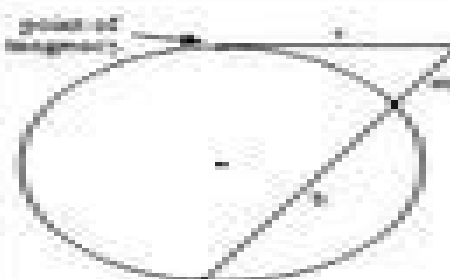

To determine the lengths, it helps to think of it this way:

$$\text{outside} \left(\begin{matrix} \text{outside} \\ \text{inside} \end{matrix} \right) = \text{outside} \left(\begin{matrix} \text{outside} \\ \text{inside} \end{matrix} \right)$$

- a = length of the outer segment
- b = length of the inner segment
- c = length of the outer segment
- d = length of the inner segment

$$\text{Length formula: } a(a + b) = c(c + d)$$

- a = length of the tangent segment
- b = length of the outer segment
- c = length of the inner segment

To determine the lengths, it helps to think of it exactly the same way:

$$\text{outside} \left(\begin{matrix} \text{outside} \\ \text{inside} \end{matrix} \right) = \text{outside} \left(\begin{matrix} \text{outside} \\ \text{inside} \end{matrix} \right)$$

$$a^2 = b(b + c)$$

$$\text{Length formula: } a^2 = b(b + c)$$

$$a^2 = m(m + B)$$

Squaring the Circle Douglas M. Jesseph, 1999 In 1655 the philosopher Thomas Hobbes claimed he had solved the centuries old problem of squaring of the circle constructing a square equal in area to a given circle With a scathing rebuttal to Hobbes's claims the mathematician John Wallis began one of the longest and most intense intellectual disputes of all time *Squaring the Circle* is a detailed account of this controversy from the core mathematics to the broader philosophical political and religious issues at stake Hobbes believed that by recasting geometry in a materialist mold he could solve any geometric problem and thereby demonstrate the power of his materialist metaphysics Wallis a prominent Presbyterian divine as well as an eminent mathematician refuted Hobbes's geometry as a means of discrediting his philosophy which Wallis saw as a dangerous mix of atheism and pernicious political theory Hobbes and Wallis's battle of the books illuminates the intimate relationship between science and crucial seventeenth century debates over the limits of sovereign power and the existence of God

Inviscid Incompressible Flow Jeffrey S. Marshall, 2001-06-25 A comprehensive modern account of the flow of inviscid incompressible fluids This one stop resource for students instructors and professionals goes beyond analytical solutions for irrotational fluids to provide practical answers to real world problems involving complex boundaries It offers extensive coverage of vorticity transport as well as computational methods for inviscid flows and it provides a solid foundation for further studies in fluid dynamics Inviscid Incompressible Flow supplies a rigorous introduction to the continuum mechanics of fluid flows It derives vector representation theorems develops the vorticity transport theorem and related integral invariants and presents theorems associated with the pressure field This self contained sourcebook describes both solution methods unique to two dimensional flows and methods for axisymmetric and three dimensional flows many of which can be applied to two dimensional flows as a special case Finally it examines perturbations of equilibrium solutions and ensuing stability issues Important features of this powerful timely volume include Focused comprehensive coverage of

inviscid incompressible fluids Four entire chapters devoted to vorticity transport and solution of vortical flows Theorems and computational methods for two dimensional axisymmetric and three dimensional flows A companion Web site containing subroutines for calculations in the book Clear easy to follow presentation Inviscid Incompressible Flow the only all in one presentation available on this topic is a first rate teaching and learning tool for graduate and senior undergraduate level courses in inviscid fluid dynamics It is also an excellent reference for professionals and researchers in engineering physics and applied mathematics
